## **Traffic light timing - consider making vehicles wait!**

**Caibidil:** Section 1: Written Statement» Chapter 6: Connectivity and Movement

Objective CMO19 – Signal Control and Pedestrians

Yes please. Pedestrians are generally required to wait extended periods after they press the "beg button". Walking is already a relatively slow activity so every second waiting at a pedestrian crossing is expensive.

Please even consider making traffic lights red until a vehicle approaches - flip the "beg button" around!
