# 1 Introduction

## 1.1 Background

Fingal County Council (FCC) is seeking permission under Part 8<sup>1</sup> of the Planning and Development Regulations 2001-2022 for the development of social housing at 30-32 North Street, Swords, Co. Dublin ('the proposed development' hereafter). The proposed development will consist of the construction of 13no. residential apartment units and associated infrastructure.

Brady Shipman Martin was appointed by the Applicant to prepare a report to assist the Competent Authority, Fingal County Council, in undertaking a screening exercise for Appropriate Assessment (AA). The purpose of the screening exercise is to assess, in view of best scientific knowledge, if the proposed development, individually or in combination with other plans or projects, is likely to have a significant effect on European sites, taking into account their conservation objectives.

This document constitutes an Appropriate Assessment Screening Report ('AA Screening Report') prepared for this purpose.

A comprehensive desk study review and site visits were undertaken and the potential for significant effects on European sites, both as a result of the proposed development and in-combination with other plans and projects, are appraised in this report.

## 1.2 Expertise and Qualifications

This AA Screening Report has been prepared by Namrata Kaile, Ecologist and Environmental Consultant at Brady Shipman Martin. She holds a Bachelor's Degree (BSc) in Life Sciences from University of Delhi and a Master's Degree (MSc) with distinction in Environmental Sciences from Trinity College Dublin. She is a qualifying member of Chartered Institute of Ecology and Environmental Management (CIEEM) and has been working professionally in the field of environmental consultancy for the last three years. Namrata is experienced in drafting and reviewing AA Screening Reports, EIA Screening Reports as well as in coordination of EIARs. She is also experienced in undertaking baseline ecological surveys and preparing Ecological Impact Assessments Reports (EclA).

A technical review of this document has been completed by Senior Ecologist and Associate, Matthew Hague BSc MSc Adv. Dip. Plan. & Env. Law CEnv MCIEEM. Matthew is a highly experienced and qualified ecologist, with a master's degree in Ecosystem Conservation and Landscape Management. He has 20 years of experience in ecological and environmental consultancy, across a wide range of sectors. Matthew is a Chartered Environmentalist (CEnv) and a full member of the Chartered Institute of Ecology and Environmental Management (MCIEEM). Matthew has also completed an Advanced Diploma in Planning and Environmental Law, at King's Inns and is a member of the Irish Environmental Law Association (IELA).

## 1.3 Legal Requirement for Appropriate Assessment

European sites make up a network of sites designated for nature conservation under Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (the "Habitats Directive") and Directive 2009/147/EC of the European Parliament and of the Council of 30 November 2009 on the conservation of wild birds (the "Birds Directive"). The requirements for Appropriate Assessment are set out under Article 6 of the Habitats Directive, transposed into Irish law

---

<sup>1</sup> Provisions with respect to specified development by, or on behalf of, or in partnership with local authorities

by the European Union (Birds and Natural Habitats) Regulations 2011-2015<sup>2</sup> (the “Birds and Natural Habitats Regulations”) and the Planning and Development Act, 2000 - 2022 (the “Planning Acts”).

European sites are also known as ‘Natura 2000 Sites’ (Special Areas of Conservation (SAC) and Special Protection Areas (SPA)). As defined in section 177R of the Planning Acts, “European site” means:

- (a) a candidate site of Community importance,
- (b) a site of Community importance,
- (ba) a candidate special area of conservation,
- (c) a special area of conservation,
- (d) a candidate special protection area and
- (e) a special protection area.

Article 6(3) of the Habitats Directive states that:

*“Any plan or project not directly connected with or necessary to the management of the site but likely to have significant effect thereon, either individually or in combination with other plans or projects, shall be subject to Appropriate Assessment of its implications for the site in view of the site’s conservation objectives. In the light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public.”*

The first test is to establish whether, in relation to a particular plan or project, Appropriate Assessment is required. Sections 177U of the Planning Acts require that the AA screening test must be applied to the proposed development, as follows:

- To assess, in view of best scientific knowledge, if the development, individually or in combination with another plan or project is likely to have a significant effect on the European site;
- An Appropriate Assessment is required if it cannot be excluded, on the basis of objective information, that the development, individually or in combination with other plans or projects, will have a significant effect on a European site.

This AA Screening Report has been prepared in accordance with the requirements of the Birds Directive, the Habitats Directive, the Planning Acts, the Birds and Natural Habitats Regulations and all relevant legislations.

## **2 Methodology**

### **2.1 Guidelines**

This report takes the aforementioned legislation and the following guidance documents into account:

- Chartered Institute of Ecology and Environmental Management (CIEEM). *Guidelines for Ecological Impact Assessment in the UK and Ireland: Terrestrial, Freshwater, Coastal and Marine*, September 2018, updated in September 2019 (V1.1), further updated in April 2022 (V1.2);
- Department of Environment, Heritage and Local Government (DoEHLG) (2010a). *Appropriate Assessment of Plans and Projects in Ireland – Guidance for Planning Authorities*;

---

<sup>2</sup> SI No. 477 of 2011

- DoEHLG (2010b). *Circular NPW 1/10 & PSSP 2/10: Appropriate Assessment under Article 6 of the Habitats Directive: Guidance for Planning Authorities*;
- European Commission (2021). *Assessment of plans and projects in relation to Natura 2000 sites- Methodological guidance on Article 6(3) and (4) of the Habitats Directive 92/43/EEC*;
- European Commission (2018). *Managing Natura 2000 sites: The Provisions of Article 6 of the Habitats Directive 92/43/EEC*;
- Directorate – General for Environment (European Commission), (2021). *Guidance document on the strict protection of animal species of Community Interest under the Habitats Directive*;
- National Roads Authority (NRA)<sup>3</sup> (2009). *Guidelines for Assessment of Ecological Impacts of National Road Schemes*;
- Office of the Planning Regulator (OPR) (2021). *Practice Note PN01 Appropriate Assessment Screening for Development Management*;
- National Parks and Wildlife Services (NPWS) (2021). *Guidance for Public authorities on the Application of Articles 12 and 16 of the EU Habitats Directive to development/works undertaken by or on behalf of a Public authority*.

## 2.2 Baseline Data Collection and Field Visits

A desk-based assessment was undertaken in September 2022 of the proposed development site and its environs. The appraisal focussed on habitats and species that are listed as Qualifying Interests (QI) (in the case of SACs) and Special Conservation Interests (SCI) (in the case of SPAs) for European sites.

In order to provide comprehensive baseline on the local ecological environment, biodiversity surveys were undertaken at the proposed development site by the authors on 7 September 2022. The surveys undertaken comprised habitat, invasive species, rare and/or protected species, mammals, bird surveys and day-time bat survey.

An assessment of habitat suitability for species with links to European sites was undertaken, in order to appraise the potential for *ex-situ* effects on European sites.

An examination of available information from Bat Conservation Ireland (BCI), previous data from neighbouring sites was also undertaken to compile a list of most likely species in the overall area in addition to the evaluation of the habitat for bats. There are no bat species listed as Qualifying Interests in any European sites within the Zone of Influence. However, Article 12 of the Habitats Directive requires Member States to take *requisite measures to establish a system of strict protection of animal species listed in Annex IV(a) in their natural range*. The potential impacts of the proposed development on bats and otters (also protected under Article 12 of the Habitats Directive) are assessed in the Environment Impact Assessment Screening that accompanies the planning application.

Overall the level of survey undertaken in 2022, provides a comprehensive biodiversity baseline for the site.

Information was collated from the organisations and websites listed below:

- Data on European sites and rare and protected plant and animal species contained in the following databases:
  - The National Parks and Wildlife Service (NPWS) of the Department of Housing, Local Government and Heritage ([www.NPWS.ie](http://www.NPWS.ie));
  - The National Biodiversity Data Centre (NDBC) ([www.biodiversityireland.ie](http://www.biodiversityireland.ie));
  - BirdWatch Ireland ([www.birdwatchireland.ie](http://www.birdwatchireland.ie));

---

<sup>3</sup> Now Transport Infrastructure Ireland (TII).

- Bat Conservation Ireland ([www.batconservationireland.org](http://www.batconservationireland.org)).
- Information on land-use zoning from the online mapping of the Department of the Environment, Community and Local Government (<http://www.myplan.ie/en/index.html>);
- Recent and historical OSi mapping and aerial imagery, including [www.geohive.ie](http://www.geohive.ie);
- Photographs taken at the site;
- Information on local watercourses from [www.catchments.ie](http://www.catchments.ie);
- Information on water quality in the area ([www.epa.ie](http://www.epa.ie));
- Information on soils, geology and hydrogeology in the area ([www.gsi.ie](http://www.gsi.ie));
- Information on the Status of EU Protected Habitats and Species in Ireland (Article 17 report) (NPWS, August 2019);
- Third National Biodiversity Plan 2017 – 2021 (Department of Culture, Heritage and the Gaeltacht, 2017);
- Fingal Development Plan 2017 – 2023 including the accompanying Appropriate Assessment documentation (Natura Impact Report);
- Draft Fingal Development Plan 2023-2029 including the accompanying Appropriate Assessment documentation (Natura Impact Report).

This report takes full account of the design of the proposed development, and a detailed examination of all relevant elements of the proposal as it currently stands, was undertaken.

## **3 Description of the Proposed Development**

### **3.1 Site Location**

The proposed site (refer to Figure 3.1 below) is located on North Street in Swords. It is bounded to the west by North Street (R836), to the south and east by Fingal Community College and by a commercial property (Des Kelly Interiors) to the north. The Swords Community Park and Ward River are c.100m and c.150m to the west, respectively.

The site is brownfield and is currently occupied by 2no. two-storey properties and single-storey outbuildings. The total area of the site is 0.142 Ha and the existing dwellings and the outbuildings measure 341m<sup>2</sup> and 113m<sup>2</sup>, respectively. The existing 2no. two-storey properties are unoccupied, street facing, semi-detached 19<sup>th</sup> century dwellings with some extensions to the rear. The buildings are derelict and in poor condition. The site also includes a stone range building to the south, a stone wall to the west boundary north of the existing dwellings and concrete block boundary walls to the east and north boundary.

The proposed development will consist of the construction of 13no. residential apartment units and associated infrastructure. As part of the proposed works, the outbuildings will be demolished along with a portion of the existing two-storey buildings, while the remaining elements (principally the façade facing onto North Street) will be incorporated into the proposed development.

Figure 3.1 The location of the proposed development site at North Street, Swords (red line is indicative, for full details refer to the accompanying documentation)

## 3.2 Development Description

The proposed development will consist of:

- Demolition of the existing range building, other outbuildings, and dwelling extensions to the back;
- Demolition and reconstruction of the boundary walls to the north and east;
- Alterations and renovations to the two existing double storey dwellings and the construction of double storey extensions to the sides and back of these dwellings to add an additional 11 dwellings in a courtyard format, bringing the total no. of dwellings on the site to 13, at a density of 91.5/Ha;
- Retaining and renovating the stone boundary walls facing North Street to the west and the southern wall of the range building on the boundary with the school to the south;
- Construction of a shared surface entranceway with parking for 6 no. vehicles, designed to the standards as set out in Design Manual for Urban Roads and Streets (DMURS 2013);
- Construction of a landscaped communal open space area, bin, and bike storage;
- Associated site development works including foul, surface water (including SuDS), water, gas, and telecommunication connections;
- The site will be serviced by Irish Water, ESB, EIR, GNI, VM utilities which are all available on North Street;
- Public lighting to pavements adjacent to and within the site will be designed and installed to the standards of the Public Lighting Section in Fingal County Council Operations department;
- Private open space is provided to all dwellings in the form of Balconies or Ground Floor Terraces with Communal open space provided in the courtyard.

### 3.3 Water Infrastructure

#### 3.3.1 Supply

The Engineering Report (McMahon Associates, 2022) states that there is existing Irish Water watermain infrastructure available within North Street (as per the record mapping of Irish Water infrastructure located around the site). A ground penetrating radar (GPR) survey confirmed the presence of a 510mm diameter trunk main and a 150mm diameter ductile iron watermain on the opposite side of North Street.

The proposed development will be connected to the 150mm diameter watermain located in North Street subject to Irish Water Approval. The watermain connection will be taken into the development and provide water to the units via boundary box meters, with the 4 No. 1st floor apartments being served by a communal manifold boundary box. From here each unit will be provided with a metered connection and distributed via 25mm diameter flexible pipes to the units. The supply arrangements will be carried out to the requirements of Irish Water.

##### 3.3.1.1 Drainage

###### Surface Water

The Engineering Report (McMahon Associates, 2022) states that the runoff from the existing properties discharges to the combined onsite sewer before discharging to the existing 600mm diameter concrete foul sewer in North Street.

It is proposed to use a sustainable urban drainage system (SuDS) approach to stormwater management on the site. SuDS are a requirement of Fingal County Council and surface water management for the proposed development will be designed to comply with the 'Greater Dublin Regional Code of Practice for Drainage Works, V6.0 2005' and the 2009 OPW Guidelines 'The Planning System and Flood Risk Management'.

The Engineering Report (McMahon Associates, 2022) notes that the proposed site is not located close to any watercourses or ditches (the Ward River is some 150m distant and there is no direct connection to this watercourse). Therefore, the discharge from the site will be via an existing surface water sewer located to the west of the proposed development within North Street. Irish Water infrastructure record mapping along with the GPR survey confirmed the presence of the concrete storm water sewer flowing in northern direction on the North Street, and it is proposed to connect into this existing storm sewer.

Currently, the site consists of former residential units and outbuildings as well as hardstanding and bare ground. Runoff from the site leaves without attenuation. It is proposed to reduce the runoff from the site by over 50% and to restrict the runoff leaving the site to 2.5 l/s. Surface water attenuation for the site will provide for the 1 in 100 year event plus take account for 10% climate change. As part of the surface water drainage strategy, it is proposed to provide the surface water attenuation in the northwest of the development. The attenuation will be located within the permeable paving area under the courtyard that will be used for parking and tree pits used in the communal greenspace area to collect and treat surface water runoff before it enters the storm water sewer on North Street. The site is too small to consider above ground storage features such as basins, swales or wetlands. It is also proposed to collect rainwater from the roofs into rainwater butts so that water can be used for amenity purposes in the units with gardens. This will provide source control and reduce the runoff from the site therefore reducing downstream flows.

## Foul Water

The Engineering Report (McMahon Associates, 2022) states that foul water from the existing dwellings are carried by a 100mm diameter connection and discharges into an existing 600mm diameter concrete foul sewer in North Street. This 100mm sewer is a combined sewer and conveys foul and surface water from the site.

The foul water strategy for the development proposes that the foul water drainage network for the proposed apartment units will be separated from the surface water sewers, and will comply with the latest *"Technical Guidance Document H - Drainage and Waste Water Disposal"*. A proposed 150mm diameter foul gravity sewer will collect wastewater from the proposed units and discharge into the existing 600mm concrete foul sewer within North Street.

A foul demarcation manhole chamber will be provided at the entrance to the site within 1m of the boundary. Given the brownfield nature of the existing site and the proposed plan to retain existing walls and portions of existing properties the current layout does not provide sufficient distance at the site entrance to satisfy Irish Water's wayleave requirements as set out in the *"Code of Practice for Wastewater Infrastructure"*. A total of 6.225m is required and only 4.0m is available. This will require agreement from Irish Water.

Once operational, foul water flows from the proposed development will be directed to Swords Wastewater Treatment Plant (WwTP). The capacity available at Swords Wastewater Treatment Works is sufficient to accommodate the inflow arising from the proposed development and it will therefore be possible to maintain the unpolluted status of the waters of the Irish Sea.

## 4 Screening for Appropriate Assessment

### 4.1 Background

The first part of the AA process is the screening phase. Screening identifies the likely effects of the proposed development on European sites that could arise, either alone or in combination with other plans or projects and considers whether these impacts are likely to have a significant effect on the European site in view of the site's conservation objectives.

In accordance with sections 177U and 177V of the Planning Acts, the AA screening test must be applied to the proposed development, as follows:

- To assess, in view of best scientific knowledge, if the development, individually or in combination with another plan or project is likely to have a significant effect on the European site;
- An Appropriate Assessment is required if it cannot be excluded, on the basis of objective information, that the development, individually or in combination with other plans or projects, will have a significant effect on a European site.

Screening must be undertaken without the inclusion of mitigation and it is in this context that this AA Screening Report is prepared.

Following screening therefore, if there is a possibility of there being a significant effect on a European site, this will generate the need for an appropriate assessment under section 177V of the Planning Acts for the purposes of compliance with Article 6(3) of the Habitats Directive. This means that if the conclusions at the end of the screening exercise are that significant effects on any European sites, as a result of the proposed development, either alone or in combination with other plans and projects, are

likely, uncertain or unknown, then an Appropriate Assessment must be carried out. This is in accordance with established precedent and case law.

## 4.2 Potential Zone of Influence

This assessment is based on the source-pathway-receptor model, which dictates that, for an effect to occur, there must be a 'source' (such as a construction site); a 'receptor' (such as a designated site for nature conservation); and a 'pathway' between the two (such as a watercourse that links the construction site to the designated site). A construction site or completed development may also create a barrier to movement, for example, by preventing the migration of fauna along a river corridor, or by obstructing the migration of birds.

Identification of a potential effect means that there is a possibility of ecological or environmental damage occurring, with the level and significance of the impact depending upon the nature and exposure to the potential effect and the characteristics of the receptor. Although there may be a risk of an impact, it may not necessarily occur, and if it does occur, it may not be significant.

There are no set recommended distances for projects to consider European sites as being relevant for assessment. In 2010, DoEHLG stated that (pp. 31 – 32):

*“The approach to screening is likely to differ somewhat for plans and projects, depending on scale and on the likely effects, but the following should be included:*

- 1. Any Natura 2000 sites within or adjacent to the plan or project area*
- 2. Any Natura 2000 sites within the likely zone of impact of the plan or project. A distance of 15km is currently recommended in the case of plans, and derives from UK guidance (Scott Wilson et al., 2006). For projects, the distance could be much less than 15km, and in some cases less than 100m, but this must be evaluated on a case-by-case basis with reference to the nature, size and location of the project, and the sensitivities of the ecological receptors, and the potential for in combination effects*
- 3. Natura 2000 sites that are more than 15km from the plan or project area depending on the likely impacts of the plan or project, and the sensitivities of the ecological receptors, bearing in mind the precautionary principle. In the cases of sites with water dependent habitats or species, and a plan or project that could affect water quality or quantity, for example, it may be necessary to consider the full extent of the upstream and/or downstream catchment.”*

The 2021 Office of the Planning Regulator (OPR) guidelines, *Practice Note PN01: Appropriate Assessment Screening for Development Management*, state that the Zone of Influence “should be established on a case-by-case basis using the Source-Pathway-Receptor framework and not by arbitrary distances (such as 15 km)” (p. 8).

Therefore, considering the nature, scale and location of the proposed development and in accordance with the source-pathway-receptor model, the potential Zone of Influence (Zol) for the proposed development has been defined as follows:

- Any site to which there is a pathway from the proposed development site during either the construction or operational phase of the development.

There are no European sites within the immediate vicinity of the proposed development site at 30-32 North Street, Swords, Co. Dublin.

The nearest Natura 2000 sites are as follows (as shown in Figure 4.2):

- Special Areas of Conservation (SAC):
  - Malahide Estuary SAC (site code 000205), c. 1.1km to the north-east;
  - Rogerstown Estuary SAC (site code 000208), c. 4.7km to the north-east;
  - Baldoyle Bay SAC (site code 000199), c. 7.2km to the south-east;
  - Rockabill to Dalkey Island SAC (site code 003000), c. 9.8km to the east;
  - North Dublin Bay SAC (site code 000206), c. 10.3km to the south-east;
  - Ireland's Eye SAC (site code 002193), c. 11.3km to the south-east;
  - Lambay Island SAC (site code 000204), c. 12.8km to the east;
  - Howth Head Coast SAC (site code 000202), c. 13.4km to the south-east;
  - South Dublin Bay SAC (site code 000210), c. 14.7km to the south-east.
  
- Special Protected Areas (SPA):
  - Malahide Estuary SPA (site code 004025), c. 1.1km to the north-east;
  - Rogerstown Estuary SPA (site code 004015), c. 5km to the north-east;
  - Baldoyle Bay SPA (site code 004016), c. 7km to the south-east;
  - North Bull Island SPA (site code 004006), c. 9.8km to the south;
  - Ireland's Eye SPA (site code 004117), c. 11.2km to the south-east;
  - Lambay Island SPA (site code 004069), c. 12.8km to the north-east;
  - Howth Head Coast SPA (site code 004113), c. 13.4km to the south-east;
  - South Dublin Bay and River Tolka Estuary SPA (site code 004024), c. 13.7km to the south.

Note that the above-listed distances are linear (i.e. 'as the crow flies').

The site of the proposed development is not under any designation for nature conservation. The nearest European site is the Malahide Estuary SAC/SPA, c. 1.1km north-east.

A review of the Environmental Protection Agency (EPA) web-tool indicates that River Ward (IE\_EA\_08W010610) runs c. 150m to the west of the proposed development site. The River Ward flows northwards and joins Broadmeadow River (IE\_EA\_08B020800) before entering the Broadmeadow / Malahide Estuary approximately 2km downstream. There is therefore a potential surface water link between the proposed development site and the Malahide Estuary via the Ward River, should surface water arising at the site discharge to the Ward River. Refer to Figure 4.1.

A second potential link to coastal European sites is via the emission point of the Swords Wastewater Treatment Plant (WwTP), which will receive foul water flows from the proposed development during its operation. The capacity available at Swords Wastewater Treatment Works is sufficient to accommodate the inflow arising from the proposed development and it will therefore be possible to maintain the unpolluted status of the waters of Irish Sea.

Proposed Housing Development at 30-32 North Street, Swords, Co. Dublin  
Appropriate Assessment Screening Report

Figure 4.1 EPA waterbodies in the proximity of the proposed development (red lines are indicative – refer to the associated engineering drawings for full details)

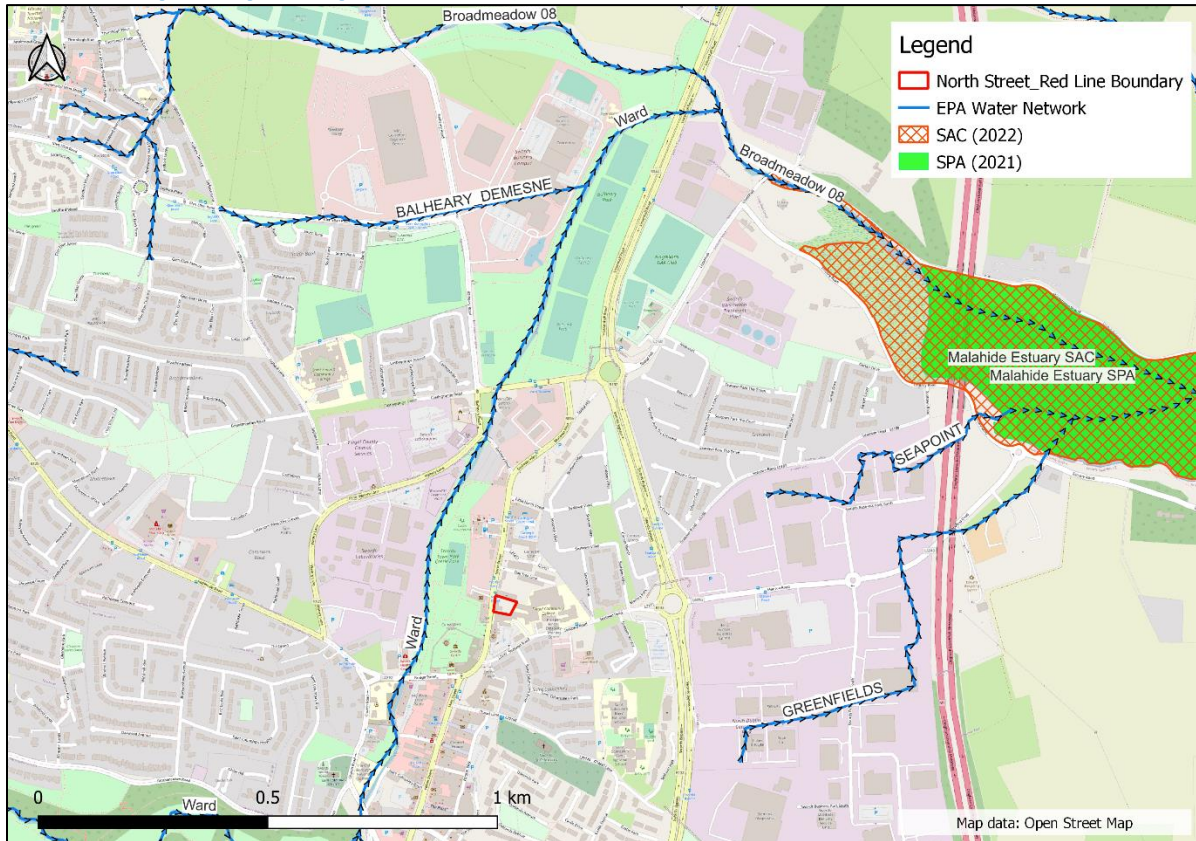

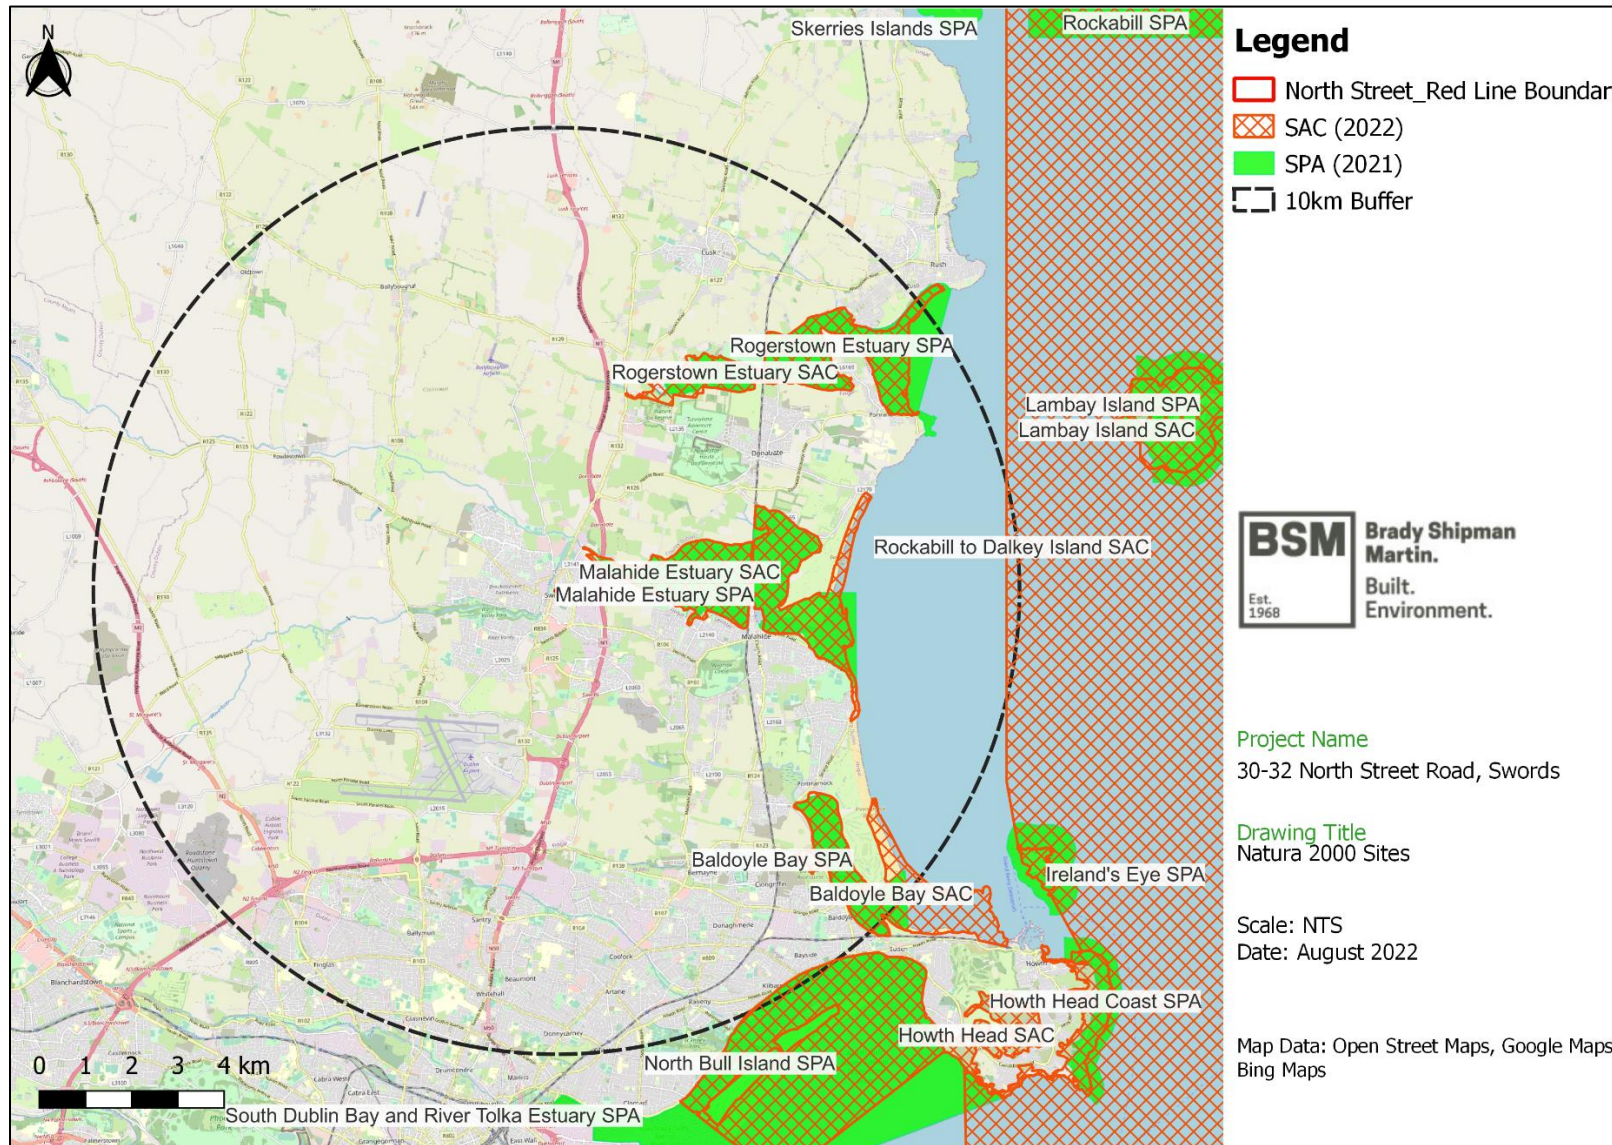

Figure 4.2 European sites within zone of influence of the proposed development. A 10km radius is shown for scale.

#### 4.2.2 Other Designated Areas (other than European sites)

Designated sites other than European sites (i.e. proposed Natural Heritage Areas (pNHA) and designated Natural Heritage Areas (NHA)) within the potential Zone of Influence have been included in this assessment in order to address their potential to act as supporting sites for European sites. There are no fully designated Natural Heritage Areas (NHA) within the potential Zone of Influence. The pNHAs within the ZOI are as follows:

- Malahide Estuary pNHA (site code 000205), c. 1.1km north-east;
- Rogerstown Estuary pNHA (site code 000208), c. 4.7km north-east;
- Portrane Shore pNHA (site code 001215), c. 7.2km north-east;
- Feltrim Hill pNHA (site code 001208), c. 2.7km south-east;
- Lambay Island pNHA (site code 000204), c. 12.8km east;
- Sluice River Marsh pNHA (site code 001763), c. 6km south-east;
- Baldoyle Bay pNHA (site code 000199), c. 7km south-east;
- Ireland's Eye pNHA (site code 000203), c. 11.3km south-east;
- Howth Head pNHA (site code 000202), c. 13.4km south-east;
- Santry Demesne pNHA (site code 000178), c. 6.5km south-west;
- North Dublin Bay pNHA (site code 000206), c. 10.3km south;
- Dolphins Dublin Docks pNHA (site code 000201), c. 13.3km south;
- South Dublin Bay pNHA (site code 000210), c. 14.7km south.

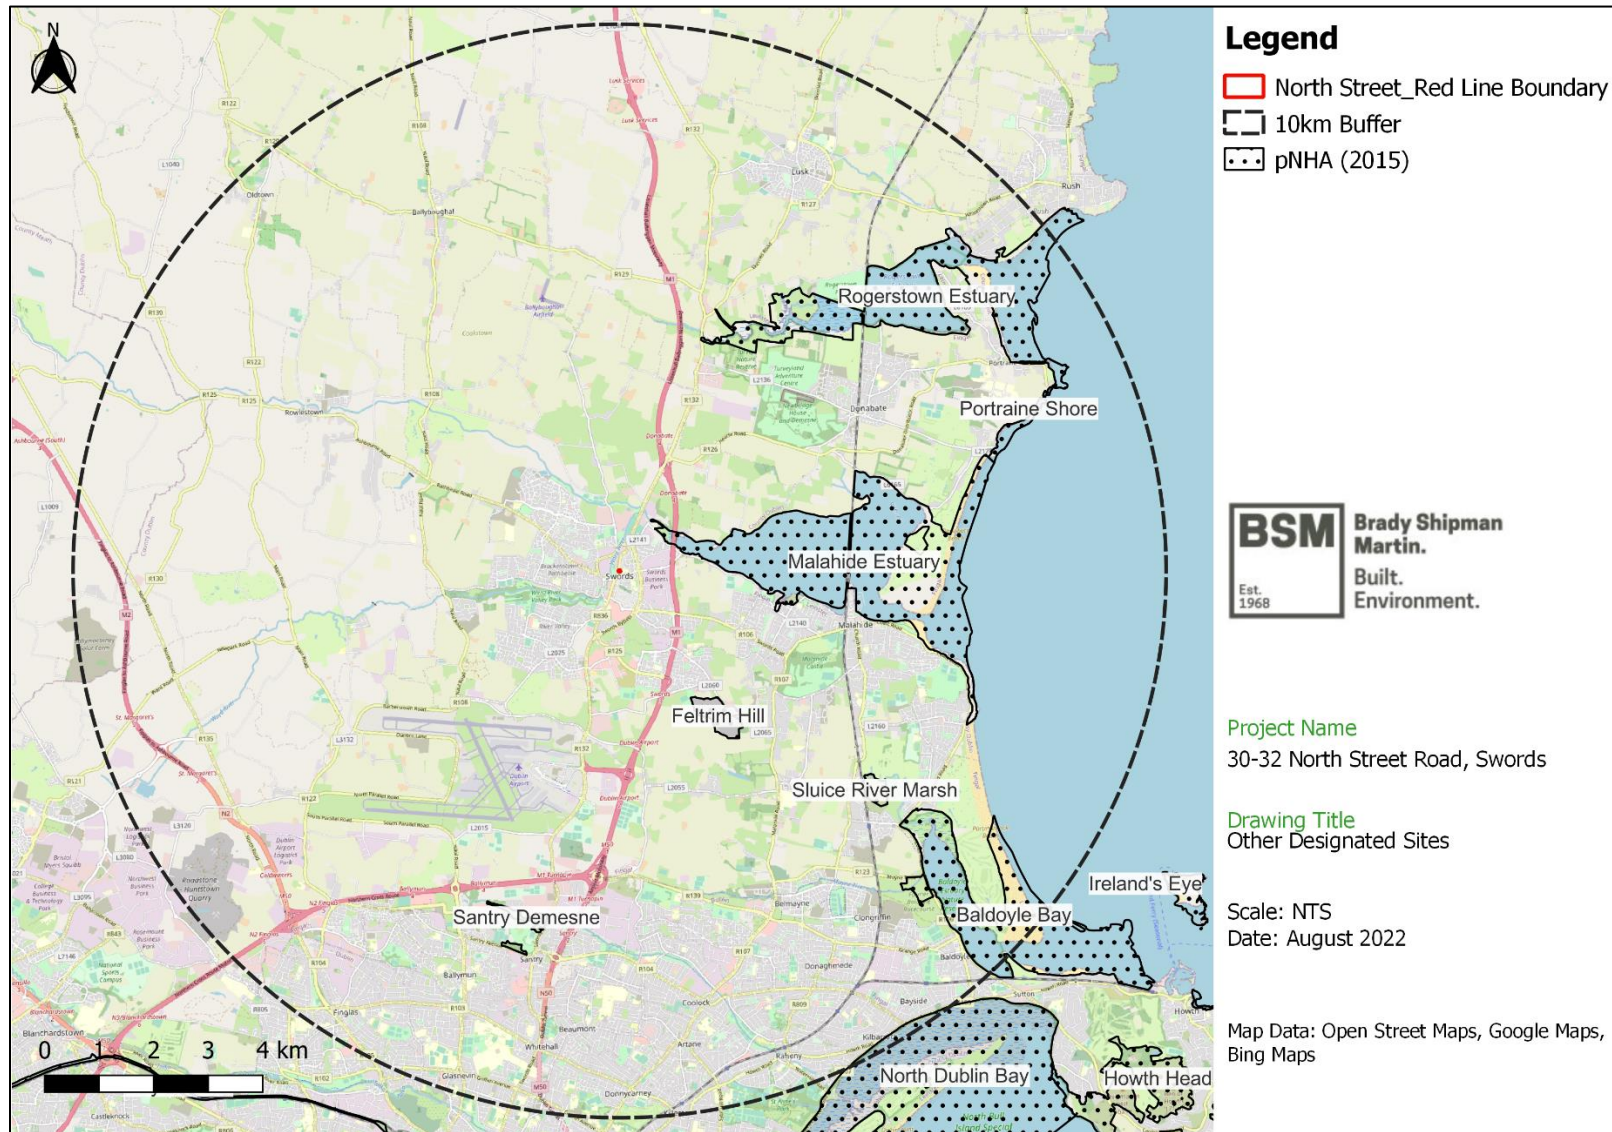

Note that above distances are as crow flies (i.e. linear distances). No impacts are expected on Malahide Estuary pNHA, nor on any other pNHA in the zone of influence.

Broadmeadow Estuary Ramsar site (833) is located c. 1.5km to the east of the site. The site includes an estuary cut off the sea by a large sand spit. The site includes well-developed saltmarshes, salt meadows, rocky shores, a well-developed outer dune ridge and sand mudflats exposed at low tide. Vegetation consists of a large bed of eelgrass (*Zostera noltii* and *Zostera angustifolium*) and extensive mats of green algae (*Enteromorpha* spp., *Ulva lactuca*). The estuary is an important wintering site for numerous species of waterbirds. The Brent goose population is of international importance. The high numbers of diving birds reflects the lagoon-type nature of the inner estuary.

Malahide Shellfish area is c. 7km to the east of the site and 'All Beds' are classified for bivalve mollusc and species of interest include razor clams. The site has seasonal classification and is classified as Class A (August to January) and then reverts to Class B at other times.

Figure 4.3 illustrates all of the pNHA within the potential Zone of Influence (including those which overlap with European sites).

Figure 4.3 pNHA sites within zone of influence of the proposed development. A 10km radius is shown for scale.

## 4.3 Study Area and Surrounding Environment

### 4.3.1 Site Location and European Sites

As per the *Fingal Development Plan 2017-2023* and the *Draft Fingal Development Plan 2023-2029*, the proposed site is zoned as *MC- Major Town Centre- 'Protect, provide for and/or improve major town centre facilities.'* The development site consist of existing dwellings at 30-32 North Street, Swords, Co. Dublin. The proposed development lands are surrounded by a commercial property (Des Kelly Interiors) to the north and by Fingal Community College to the south and east.

No significant habitats were recorded on the proposed development site. The proposed site comprises of existing unoccupied houses and outbuildings at 30-32 North Street (Fossitt code **BL3** buildings and artificial surfaces). The remainder of the site, is made up of a mosaic of artificial habitats, mainly spoil and bare ground, scrub, recolonising bare ground and long-abandoned flower beds and borders (**ED2/WS1/ED3/BC4**). It has been left unmanaged for some time. Species recorded are those that would be expected at such a site and include patches of buddleia (*Buddleja davidii*) and sycamore (*Acer pseudoplatanus*) scrub, as well as willow (*Salix* spp.) saplings. The more vegetated areas are dominated by grasses, with bramble (*Rubus fruticosus* agg.) frequent. Other species recorded included red valerian (*Centranthus ruber*), tutsan (*Hypericum androsaemum*), dock (*Rumex* spp.), red clover (*Trifolium pratense*), curled dock (*Rumex crispus*), common ragwort (*Jacobaea vulgaris*) and nettle (*Urtica dioica*). The walls of the buildings have extensive ivy (*Hedera* sp.).

No badgers or other protected mammal species are known to be present and no evidence of such species was recorded or in the immediate vicinity. The site is entirely unsuited to use by badgers, otters (protected under Article 12 of the Habitats Directive).

No evidence of bats (including bats themselves, or carcasses, droppings, staining or feeding remains) was noted anywhere within any of the buildings on the site. The condition of the buildings, with extensive roof damage (significant parts of the buildings are open to the elements and very wet) renders it highly unlikely that bats would ever roost there in significant numbers.

No evidence of bird nesting was recorded in the buildings or anywhere else on the site, however three long-abandoned mud nests (likely swallow) were recorded in one of the outbuildings.

No species listed on the Third Schedule of the Habitats Regulations, such as giant hogweed (*Heracleum mantegazzianum*), Japanese knotweed (*Reynoutria japonica*), Himalayan balsam (*Impatiens glandulifera*) or three-cornered leek (*Allium triquetrum*) were recorded at the proposed development site during the surveys undertaken in the preparation of this report.

As noted in Section 4.2, the Ward River (IE\_EA\_08W010610) runs c. 150m to the west of the proposed development site. The Ward River flows northwards and joins Broadmeadow River (IE\_EA\_08B020800) before entering the Broadmeadow / Malahide Estuary approximately 2km downstream. The proposed development site is located within the Nanny-Delvin Catchment, Broadmeadow\_SC\_010 sub-catchment and Ward\_040 sub-basin.

As per the WFD 2013-2018 status, the Ward River and Broadmeadow\_040 River is of 'Poor' status and is 'At risk' of failing to achieve its WFD objective / good status by 2027. The third WFD cycle report for the Nanny Delvin catchment notes that the River Ward has 'Poor' ecological status and there is significant pressure on the Ward River due to hydromorphology (due to channelisation), urban run-off and urban waste water. The associated identified significant pressures on the Broadmeadow\_040 River (IE\_EA\_08B020800) are due to agriculture and hydromorphology. As per the EPA maps, the Broadmeadow Estuary (Inner) is classified as a nutrient sensitive estuary (WFD code EA\_060\_0100) and

is 'At risk' of achieving of failing to achieve its WFD objective / good status by 2027. The ecological status of the Estuary has degraded from 'Moderate' in WFD 2010-2015 cycle to 'Poor' in the WFD 2013-2018 cycle.

There are 17no. European sites located within the potential Zone of Influence (Figure 4.2):

- Malahide Estuary SAC (site code 000205), c. 1.1km to the north-east;
- Malahide Estuary SPA (site code 004025), c. 1.1km to the north-east;
- Rogerstown Estuary SAC (site code 000208), c. 4.7km to the north-east;
- Rogerstown Estuary SPA (site code 004015), c. 5km to the north-east;
- Baldoyle Bay SPA (site code 004016), c. 7km to the south-east;
- Baldoyle Bay SAC (site code 000199), c. 7.2km to the south-east;
- Rockabill to Dalkey Island SAC (site code 003000), c. 9.8km to the east;
- North Bull Island SPA (site code 004006), c. 9.8km to the south;
- North Dublin Bay SAC (site code 000206), c. 10.3km to the south-east;
- Ireland's Eye SPA (site code 004117), c. 11.2km to the south-east;
- Ireland's Eye SAC (site code 002193), c. 11.3km to the south-east;
- Lambay Island SAC (site code 000204), c. 12.8km to the east;
- Lambay Island SPA (site code 004069), c. 12.8km to the north-east;
- Howth Head Coast SAC (site code 000202), c. 13.4km to the south-east;
- Howth Head Coast SPA (site code 004113), c. 13.4km to the south-east;
- South Dublin Bay and River Tolka Estuary SPA (site code 004024), c. 13.7km to the south;
- South Dublin Bay SAC (site code 000210), c. 14.7km to the south-east.

The Conservation Objectives of these Sites are to maintain the favourable conservation condition of the QIs / SCIs in question. Where specific conservation objectives have been set out by the NPWS, 'favourable conservation condition' is defined in respect of specific attributes and targets for the habitat or species in question. For further information, refer to Appendix II.

## **5 Potential impacts from the proposed development including in-combination effects**

### **5.1 European sites and habitats with links to European sites**

The proposed development site is not under any wildlife or conservation designation. Furthermore, no rare, threatened or legally protected plant species, as listed in the *Irish Red Data Book 1 – Vascular Plants (Curtis & McGough, 1988)*, the *Flora Protection Order, 2022* or the EU Habitats Directive, are known to occur within the site and none were recorded.

No rare habitats or habitats of particularly high ecological value (i.e. International, National, County or Local Importance) are present at the site. No rare plants have been recorded on the site.

No evidence of any habitats or species with links to European sites was recorded during either the field survey or desk study undertaken and no 'reservoir' type habitats (habitats which have the potential to support Qualifying Interest / Special Conservation Interest species in any European site) are present. The site is entirely unsuited to use by any bird species listed as Special Conservation Interests in any of the European sites within the potential Zone of Influence.

No evidence of badgers, otters (protected under Article 12 of the Habitats Directive), amphibians or reptiles has been recorded within the proposed development area, and no bat roosts have been recorded.

Overall the development site has **no ecological importance** as defined by the ecological resource valuations presented in the National Roads Authority/ Transport Infrastructure Ireland Guidelines for Assessment of Ecological Impacts of National Road Schemes (NRA/TII, 2009 (Rev. 2)).

### 5.1.1 Potential impacts during construction

At any development site, demolition and construction activities pose a potential risk to water as surface / ground water arising at a site may contain contaminants. The main contaminants arising from construction activities may include suspended solids, hydrocarbons and concrete / cement products. If not properly managed, such pollutants could pose a temporary risk to surface water quality in the local surface water network during construction.

No watercourses are present within or connected to the proposed development site at 30-32 North Street, Swords. The nearest watercourse to the site, the Ward River, flows c. 150m to the west of the site. The Ward River flows northwards, joins the Broadmeadow River near Lissenhall and drains into Malahide Estuary near the M1 motorway, approximately 1.1km to the north-east of the proposed site.

Given the location of the site in relation to the Ward River a theoretical potential surface water pathway exists between the proposed development site and the two European sites associated with Malahide Estuary (i.e. Malahide Estuary SAC and Malahide Estuary SPA).

Considering the distance to the Ward River, there is no possibility that polluted surface water could be emitted directly to it. There is a possibility that contaminated surface water from the site could enter the municipal surface water drainage network adjacent to the site and be indirectly discharged to surface waters via the drainage network (e.g. during extreme rainfall events and /or high tides), thereby creating an indirect hydrological pathway linking the proposed development site with European Sites downstream. There is also a potential groundwater pathway between the proposed development site and these European sites should indirect discharges (i.e. spillages to ground) occur, or should any contamination on the site enter the ground water.

However, despite the presence of these indirect pathways, the risk of contamination of any watercourses or groundwater is extremely low, and even in the event of a pollution incident significant enough to impact upon surface water quality locally, it is reasonable to assume that **this would not be perceptible in the offshore European sites**, for the following reasons:

- There is a significant distance between the site of the proposed development and the nearest European sites. The nearest such site is the Malahide Estuary SAC/SPA, c.1.1km north-east (straight-line distance) and there is no direct pathway between the proposed development site and these European sites, other than potentially via the surface water drainage network and the Ward River;
- Any pollution from the demolition and construction works would be minimal in quantity and if it entered any watercourse it would be so diluted as to be undetectable by the time the water enters the estuary. A significant level of dilution and mixing of surface and sea water would occur in any event. Upon reaching the estuary any pollutants would be even further diluted and dissipated by the receiving waters;
- In addition, the construction of the proposed development will take place over a comparatively short period. There is no possibility of long-term impacts arising as a result of the construction elements of the proposed development, given the nature and scale of the proposed development and its location in the centre of a busy town away from the European sites.

During the construction phase, typical environmental effects associated with construction works of this nature and scale are predicted, including potential elevated levels of noise, emissions of dust, direct

and indirect greenhouse gas emissions, etc. These effects will be short-term in duration and at most, temporary and reversible. There will also be environmental risks associated with the presence of potential pollutants typically stored and used on-site (e.g. hydrocarbons, solvents, cementitious materials).

There is no possibility of any other potential direct, indirect or secondary impacts on any European site during the construction phase. For example there will be no land-take from any European site and there will be no resource requirements such as water abstraction. Similarly there will be no emissions to air from construction vehicles that could remotely impact any European site. Dust, noise and vibration arising during construction will similarly be entirely remote from any European site.

There will be no loss, fragmentation, disruption, disturbance or other change to any element of any European site as a result of the construction of the proposed development, and no interference with the key relationships that define the structure or function of any European site.

**Significant effects arising as a result of the construction of the proposed development, on European sites (or on proposed Natural Heritage Areas), can therefore be excluded.**

### **5.1.2 Potential impacts during operation**

During the operational phase, typical environmental effects associated with the presence and operation of a residential apartment development are also predicted, including water consumption, surface and foul water loading to the municipal network, additional traffic volumes and direct and indirect greenhouse gas emissions. Operational phase effects are expected to be permanent in duration. However it is noted that the site is located in an existing urban setting (the centre of Swords) and all existing services are readily available. The type of development proposed is appropriate to the site.

As set out in the Engineering Report prepared by McMahan Associates and discussed in Section 3.3.2, it is proposed to use a sustainable urban drainage system (SuDS) approach to storm water management throughout the site. In accordance with local and national guidance. The surface water arising at the proposed development site will be attenuated and the runoff leaving the site will be reduced by over 50% of the existing scenario. It is proposed to discharge attenuated surface water from the site to the public storm network on North Street. The attenuation systems are designed to accommodate the 1 in 100 year storm event plus 10% climate change. The attenuation will be provided within the permeable stone layer under the permeable paving within the courtyard that will be used for parking and tree pits used in the communal greenspace area to collect and treat surface water runoff. It is also proposed to collect rainwater from the roofs into rainwater butts so that water can be used for amenity purposes in the units with gardens. This will provide source control and reduce the runoff from the site therefore reducing downstream flows. The site is too small to consider any above ground storage features such as basins, swales or wetland.

Even in the total absence of any SuDS measures there would be no impacts on any European sites. The significant distances to European sites and the natural characteristics of the receiving waters ensure rapid mixing of water such that there is no possibility of any appreciable effect on water quality in European sites in any event.

As set out in the Engineering Report, the Office of Public Works (OPW) CFRAM flood studies maps there is no fluvial, coastal, pluvial or groundwater flood risk at the site.

**Significant effects related to surface water management or flooding, arising as a result of the operation of the proposed development, on European sites or otherwise, can therefore be excluded.**

As per the Engineering Report prepared by McMahon Associates, a proposed 150mm diameter foul gravity sewer will collect the wastewater via soil vent pipes and inspection chambers from the proposed units and discharge into the existing 600mm concrete foul sewer within North Street. A foul demarcation manhole chamber will be provided at the entrance to the site within 1m of the boundary. Given the brownfield nature of the development and the desire to retain existing walls and properties the current layout does not provide sufficient distance at the site entrance to satisfy Irish Water's wayleave requirements as set out in the "*Code of Practise for Wastewater Infrastructure*". This will require agreement from Irish Water.

As noted in Section 3.3.2.2, once operational foul water flows from the proposed development will be directed to Swords Wastewater Treatment Plant (WwTP). The capacity available at Swords Wastewater Treatment Works is sufficient to accommodate the inflow arising from the proposed development and it will therefore be possible to maintain the unpolluted status of the waters of the Irish Sea.

**Significant effects related to foul water management, arising as a result of the operation of the proposed development, on European sites or otherwise, can therefore be excluded.**

There is no possibility of any other potential direct, indirect or secondary impacts on any European site once the proposed development is operational. There will be no loss, fragmentation, disruption, disturbance or other change to any element of any European site as a result of the operation of the proposed development, and no interference with the key relationships that define the structure or function of any European site.

Operation-related impacts as a result of the proposed development, on European sites or otherwise, can therefore be excluded.

A detailed discussion of the potential impacts of the proposed development on individual European sites within the potential Zone of Influence is presented in Table 5.1, below.

Table 5.1 Potential impacts on designated sites in the potential Zone of Influence

Site	Reasons for designation (information correct as of 5 August 2022) (*denotes a priority habitat)	Discussion of Source-Pathway-Receptor Link	Likely Significant Effect?
<p>Malahide Estuary SAC (000205) c. 1.1km to the north-east</p>	<ul style="list-style-type: none"> <li>■ 1140 Mudflats and sandflats not covered by seawater at low tide</li> <li>■ 1310 Salicornia and other annuals colonising mud and sand</li> <li>■ 1320 Spartina swards (Spartinion maritimae)</li> <li>■ 1330 Atlantic salt meadows (Glaucopuccinellietalia maritimae)</li> <li>■ 1410 Mediterranean salt meadows (Juncetalia maritimi)</li> <li>■ 2120 Shifting dunnes along the shoreline with Ammophila arenaria (white dunes)</li> <li>■ 2130 Fixed coastal dunes with herbaceous vegetation (grey dunes)*</li> </ul> <p>*indicates a priority habitat under the Habitats Directive</p> <p>According to this SAC's site Conservation Objectives document (Version 1, dated 27 May 2013), for each of the listed QIs, the Conservation Objective is to maintain or restore the favourable conservation condition of the Annex I habitat(s) and/or the Annex II species for which the SAC has been selected.</p>	<p>No significant effects on water quality, and therefore on the site's QIs, are predicted.</p> <p>Surface/ground water arising during the site clearance and demolition, construction and operation of the proposed residential development could contain pollutants (foul water, silt, hydrocarbons and other chemicals). Such contaminated water could potentially discharge to the ground or the local surface water drainage network or the Ward River and from there, eventually, to Malahide Estuary. There would be no significant effects on the conservation objectives of the European site should this occur, given the nature, size and location of the proposed development, as described in Section 5.1.1 and 5.1.2. Even in the event of a pollution incident (such as a fuel or cement spill) significant enough to impact upon surface/ground water quality in the proposed development site, any pollution from the construction site would be minimal in quantity and if it entered any watercourse it would be so diluted as to be undetectable by the time the water enters the estuary and would not be perceptible in Malahide Estuary SAC, due to the very small volumes.</p> <p>This is due to the separation between the proposed development site and the European site – the proposed development site is c.1.1km (straight line distance) from the SAC and any pollution arising during construction would be so diluted as to be undetectable by the time the water enters the estuary. In addition, significant dilution and mixing of surface and sea water would occur. Upon reaching the estuary any pollutants would be even further diluted and dissipated by the receiving waters. Furthermore, the construction of the proposed development will take place over a comparatively short period and there is no possibility of long-term impacts arising as a result of the construction elements of the proposed development given the nature and scale of the proposed development, on an already developed site and its location in the centre of a busy town at a remove from the European sites.</p> <p>There is a potential indirect hydrological pathway between the proposed development and European Sites in Irish Sea via the municipal wastewater drainage network (which contains overflow arrangements) and the Swords WWTP. However, as detailed above, considering the capacity available at Swords WWTP, and the substantial dilution factor in the sea, there is no possibility of significant impacts on</p>	<p>No</p>

**Appropriate Assessment Screening Report**

Site	Reasons for designation (information correct as of 5 August 2022) (*denotes a priority habitat)	Discussion of Source-Pathway-Receptor Link	Likely Significant Effect?
	Conservation Objective is to maintain the favourable conservation condition of the Annex I habitat for which the SAC has been selected.		

## 5.2 Summary of potential impacts of the proposed development

There will be no loss of any habitat or species listed as a QI or SCI of any designated site as a consequence of the proposed development. There is, therefore, no potential for the effects of habitat loss or fragmentation to occur.

There will also be no significant effects on any European sites as a result of:

- Land-take;
- Resource requirements such as water abstraction;
- Impacts to habitat structure;
- Mortality to species (such as roadkill);
- Noise pollution / vibration impacts;
- Light pollution;
- Air pollution (including dust).

## 6 Mitigation Specific to European Sites

This screening assessment is consistent with the judgment of the European Court in Case C-323/17, *People Over Wind & Sweetman v Coillte* (Judgment of the Court (Seventh Chamber) of 12 April 2018) and the recent case-law of the High Court, including *Heather Hill Management Company CLG v An Bord Pleanála* [2019] IEHC 450 and *Sweetman v An Bord Pleanála* [2020] IEHC 39. It is also consistent with the judgment in *Eco Advocacy CLG v An Bord Pleanála* [2021] IEHC 265. In that case, *Humphreys J* confirmed the core legal principle, being that regard should not be had to mitigation measures at AA screening stage. *Humphreys J* decided in that case that clarification was required from the CJEU on the matter (as it related to the consideration of SUDs and whether these represented mitigation measures) and the decision of the CJEU is currently awaited. Regardless of the outcome of that case, in relation to European sites, there will be no impacts as a result of the proposed development.

As set out in Sections 5.1.1 and 5.1.2 of this report, it is certain that likely significant effects on European sites as a result of both the construction and operation of the proposed development can be excluded. Even if no SuDS measures were to be incorporated into the design there could be no impacts on European sites.

No mitigation is necessary or proposed for the protection of European sites.

## 7 In-combination Effects

It is a requirement of Section 177U of the Planning Acts that, when considering whether a plan or project will have a significant effect on a European site, the assessment must take into account in-combination effects with other plans and projects. The assessment should consider plans and projects that are completed, approved but uncompleted, or proposed (but not yet approved)<sup>4</sup>. If there are identified effects arising from the plan or project, even if they are perceived as minor and not likely to have a significant effect on the integrity of a European site alone, then these effects must be considered in combination with the effects arising from other plans and projects.

The following sources were consulted to identify relevant other plans or projects:

- Fingal Development Plan 2017-2023 (FCC, 2017);
- Draft Fingal Development Plan 2023-2029 (FCC, 2022);

---

<sup>4</sup> Assessment of Plans and Projects Significantly Affecting European sites: Methodological Guidance on the Provisions of Article 6(3) and (4) of the Habitats Directive 92/43/EEC (European Commission Environment Directorate-General, 2001)

## Proposed Housing Development at 30-32 North Street, Swords, Co. Dublin

### Appropriate Assessment Screening Report

- The National Planning Application database ([www.myplan.ie](http://www.myplan.ie) - accessed September 2022);
- An Board Pleanála database ([www.pleanala.ie](http://www.pleanala.ie) - accessed September 2022); and
- EIA Portal ([www.housinggov.ie/maps.arcgis.com](http://www.housinggov.ie/maps.arcgis.com) - accessed September 2022).

Permission was previously granted on the proposed development site in 2016 (F16A/0166) for removal of existing outbuildings; alterations to existing two houses and 2-storey extensions at sides with a balcony to front. Permission was also granted previously on the same site in 2010 (F09A/0495) for partial demolition of existing house and demolition of all associated out-buildings and construction of mixed use development.

No developments are proposed within the immediate vicinity of the site that would, in combination with the development under appraisal in this report, give rise to significant effects. This includes projects that are currently under construction, have recently been granted planning permission or are awaiting a decision, such as:

- F22A/0200, Carnegie Court Hotel, North Street, Swords, Co Dublin: Permission was granted in August 2022 for revisions to approved development consisting of internal alterations for the provision of 35 no. bedrooms (Planning F15A/0584). The revised total number of additional guest rooms to the proposed conversion is to be reduced from 35 no. to 8 no. in total. Planning permission was also sought as in previously approved for minor external elevational changes to the northern elevation southern courtyard elevation to premises;
- SHD/002/20, Fostertown North, Dublin Road/R132, Swords, Co Dublin: A decision is pending for Strategic Housing Development of 645 no. residential units (comprising 208 no. 1 bedroom units, 410 no. 2 bedroom units, and 27 no. 3 bedroom units), in 10 no. apartment buildings, with heights ranging from 4 no. storeys to 10 no. storeys, including undercroft / basement levels (for 6 no. of the buildings). The proposals include 1 no. community facility in Block 1, 1 no. childcare facility in Block 3, and 5 no. commercial units (for Class 1-Shop, or Class 2- Office / Professional Services or Class 11- Gym or Restaurant / Café use, including ancillary takeaway use) in Blocks 4 and 8;
- Swords Cultural Centre: Fingal County Council has prepared a Part 8 plan to develop a Cultural Quarter in the centre of Swords, County Dublin, in proximity to the offices of Fingal County Hall and Swords Castle. The application was approved by the Members of Fingal County Council on 12 September 2022;
- A further Part 8 submission for 36 no. residential apartments at Seatown Road, Swords, c. 100m south to the proposed site is being brought forward at the same time as this application.

The Fingal County Development Plan 2017-2023 has a series of objectives intended to protect and enhance the natural environment. For example the plan includes policies for the protection of the county's flood plains, to prevent development in flood plains without satisfying the appropriate justification test and to require the use of sustainable drainage systems (SuDS) to minimise and limit the extent of hard surfacing and paving in order to reduce the potential impact of existing and predicted flooding risks.

The proposed development will not impact on the flow of water through the area, nor increase potential flood impacts. It is in compliance with all of the relevant Plan objectives.

A number of other plans were considered when assessing in-combination effects, but it was determined that there would be no in-combination effects with these:

- National Planning Framework;
- Regional Spatial and Economic Strategy;
- Greater Dublin Strategic Drainage Study;

## Proposed Housing Development at 30-32 North Street, Swords, Co. Dublin

### Appropriate Assessment Screening Report

- Greater Dublin Transport Strategy;
- Climate Action and Mitigation Plan;
- National Biodiversity Plan; and
- River Basin Management Plan.

It is considered that significant in-combination effects on European sites are not likely to occur as a result of the proposed development in combination with other plans or projects.

## 8 Screening Conclusion

In view of best scientific knowledge, this report concludes that the proposed residential apartment development at 30-32 North Street, Swords, Co. Dublin; individually or in combination with another plan or project, will not have a significant effect on any European sites. This conclusion was reached without considering or taking into account mitigation measures or measures intended to avoid or reduce any impact on European sites.

It is considered that this report provides sufficient relevant information to allow Fingal County Council to carry out an Appropriate Assessment Screening, and reach a determination that the proposed development will not have any likely significant effects on European sites under Article 6 of the Habitats Directive in light of their conservation objectives.

## Appendix I: Background

The European<sup>6</sup> network is a Europe-wide network of ecologically important sites (SPAs and cSACs – also known as ‘European Sites’ or ‘Natura 2000 sites’) that have been designated for protection under either the EU Birds Directive (Council Directive 79/409/EEC on the Conservation of Wild Birds) or the EU Habitats Directive (Council Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Flora and Fauna).

The main aim of the Habitats Directive is “to contribute towards ensuring biodiversity through the conservation of natural habitats of wild fauna and flora in the European territory of the Member States to which the treaty applies”. Any actions taken must be designed to “maintain or restore, at a favourable conservation status, natural habitats and species of wild fauna and flora of Community interest”. Under Article 6 of the Habitats Directive, an assessment is required where a plan or project may give rise to significant effects upon a European site.

In addition, it is a matter of law that candidate SACs (cSACs) and Sites of Community Importance (SCI) are considered in this process;

Article 6 (paragraphs (3) and (4)) of the Habitats Directive states that:

(3) Any plan or project not directly connected with or necessary to the management of the site but likely to have significant effect thereon, either individually or in combination with other plans or projects, shall be subject to Appropriate Assessment of its implications for the site in view of the site’s conservation objectives. In the light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public.

(4) If, in spite of a negative assessment of the implications for the site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of social or economic nature, the Member State shall take all compensatory measures necessary to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted.

Where the site concerned hosts a priority natural habitat type and/or a priority species, the only considerations which may be raised are those relating to human health or public safety, to beneficial consequences of primary importance for the environment or, further to an opinion from the Commission, to other imperative reasons of overriding public interest.

The requirements of the Habitats Directive are transposed into Irish law by means of the *European Union (Birds and Natural Habitats) Regulations 2011-2015* (hereafter referred to as the *Birds and Habitats Regulations*)<sup>7</sup> and by the *Planning and Development Act 2000*, as amended.

In Ireland, the statutory agency responsible for the designated areas is NPWS.

### ***Stages in the Assessment***

### Appropriate Assessment Screening Report

European Commission guidance (2021)<sup>8</sup> sets out the principles on how to undertake decision making in applying the Habitats Directive. The requirements of the Habitats Directive comprise four distinct stages:

**Stage 1: Screening** is the process which initially identifies the likely significant effects upon a European site of a project or plan, either alone or in combination with other projects or plans, and considers whether these impacts may be significant. It is important to note that the burden of evidence is to show, on the basis of objective information, that there will be no significant effect; if the effect may be significant, or is not known, that would trigger the need for an Appropriate Assessment. There is European Court of Justice case law to the effect that unless the likelihood of a significant effect can be ruled out on the basis of objective information, then an Appropriate Assessment must be made.

**Stage 2: Appropriate Assessment** is the detailed consideration of the impact on the integrity of the European site of the project or plan, either alone or in combination with other projects or plans, with respect to the site's conservation objectives and its structure and function. This is to determine with scientific certainty whether or not there will be adverse effects on the integrity of the site in light of its conservation objectives. This stage also includes the development of mitigation measures to avoid or reduce any possible impacts.

**Stage 3: Assessment of alternative solutions** is the process which examines alternative ways of achieving the objectives of the project or plan that would avoid impacts on the integrity of the European site, should avoidance or mitigation measures be unable to cancel out adverse effects.

**Stage 4: Assessment where no alternative solutions exist and where adverse impacts remain.** At Stage 4 an assessment is made with regard to whether or not the development is necessary for imperative reasons of overriding public interest (IROPI) and, if so, of the compensatory measures needed to maintain the overall coherence of the European network.

## Appendix II: Conservation Objectives of European Sites

The conservation objectives for a European Site are intended to represent the aims of the Habitats and Birds Directives in relation to that site. To this end, habitats and species of European Community importance should be maintained or restored to 'favourable conservation status' (FCS), as defined in Article 1 of the Habitats Directive below:

The conservation status of a natural habitat will be taken as 'favourable' when:

- Its natural range and the area it covers within that range are stable or increasing;
- The specific structure and functions which are necessary for its long term maintenance exist and are likely to continue to exist for the foreseeable future;
- Conservation status of typical species is favourable as defined in Article 1(i).

The conservation status of a species will be taken as favourable when:

- Population dynamics data on the species concerned indicate that it is maintaining itself on a long-term basis as a viable component of its natural habitats;
- The natural range of the species is neither being reduced nor is likely to be reduced for the foreseeable future;
- There is, and will probably continue to be, a sufficiently large habitat to maintain its populations on a long-term basis.

Guidance from the European Commission<sup>9</sup> indicates that the Habitats Directive intends FCS to be applied at the level of an individual site, as well as to habitats and species across their European range. Therefore, in order to properly express the aims of the Habitats Directive for an individual site, the conservation objectives for a site are essentially to maintain (or restore) the habitats and species of the site at (or to) FCS.

The European Commission guidance recommends that screening should fulfil the following steps:

1. Determine whether the plan (or policy) is directly connected with or necessary for the management of European sites;
2. Describe the plan and describe and characterise any other plans or projects which, in combination, have the potential for having significant effects on European sites;
3. Identify the potential effects on European sites;

Assess the likely significance of any effects on European sites.
