1 Non-Technical Summary

1. The development consists of public realm improvements for a pedestrianised New Street in Malahide, Co. Dublin.

2. A number of traffic surveys were compared in order to assess any change in traffic flows due to the proposed public realm improvements for a pedestrianised New Street.

3. It is proposed to access the development as follows:

    a. A one-way restricted vehicular traffic system (northbound).
    b. Deliveries permitted from 7am-11am each day, with vehicle bollards at the Diamond as control measure.
    c. Unrestricted vehicular access to Ross Cottages (from the north).

4. Capacity analysis was carried out on 11 no. junctions:
    1. Junction of New Street, Strand Street, The Green, Marina Village (signalised junction)
    2. Junction of Old Street and Strand Street
    3. Junction of Townyard Lane and Strand Street
    4. The Diamond - Junction of New Street and R106 (signalised junction)
    5. Junction of Townyard Lane and The Mall (R106)
    6. Junction of Old Street and Dublin Road (R106)
    7. Junction of James' Terrace and The Mall (R106)
    8. Junction of the Rise and The Mall (R106)
    9. Junction of Grove Road and The Mall (R106)
    10. Junction of Grove Road and the Rise
    11. Junction of Grove Road and Church Road

    The analysis shows that, when comparing the 2023 post-pedestrianisation with the 2019 pre-pedestrianisation scenarios, there are minimal effects on the capacity for the surrounding junctions.

5. Parking spaces for the proposed development are restricted to a single accessible parking facility at the HSE building location.

6. Secure cycle parking facilities have been provided within the proposed public realm improvements to meet the requirements set out in the Fingal Development Plan 2023-2029.

2 Introduction

PUNCH Consulting Engineers as part of a multidisciplinary design team led by DFLA were commissioned by Fingal County Council (FCC) to carry out a Traffic and Transportation Assessment (TTA) for proposed public realm improvements for a pedestrianised New Street in Malahide, Co. Dublin.

The assessment has been carried out in accordance with TII's Traffic and Transport Assessment Guidelines PE-PDV-02045 (May 2014) and makes reference to the Design Manual for Urban Roads & Streets (DMURS). Sections from the Fingal Development Plan (2023-2029) have been used to help describe the development location and its local context.

The purpose of the TTA report is to assess the impact of the proposed public realm improvements on a pedestrianised New Street on the existing local transport network in comparison with the pre-pedestrianised scenario. An assessment of the accessibility of the site for cyclists, pedestrians and public transport users has also been made.

3 Existing Conditions

3.1 Site Location

The site is approximately 0.22 hectares in area located at New Street, Malahide Village. The site currently consists of an established town street with retail, commercial and residential development throughout. The topography of the street falls from south at The Diamond, The Mall, Main Street, and Church Road junction to the north at the Strand Street junction. The site is located within the Fingal Development Plan 2023-2029.

Refer to Figure 3-1 below.

The access points to the proposed development are as follows:

i. From the south at the junction with Mall Street (one-way time restricted vehicular traffic system).
ii. From the north at the junction with Strand Street (unrestricted vehicular access to Ross Cottages).

The site is located a short distance from Malahide Beach and Marina, Malahide Castle Public Park, and Malahide DART station. It is located approximately 20 km from Dublin City Centre (Connolly Station).

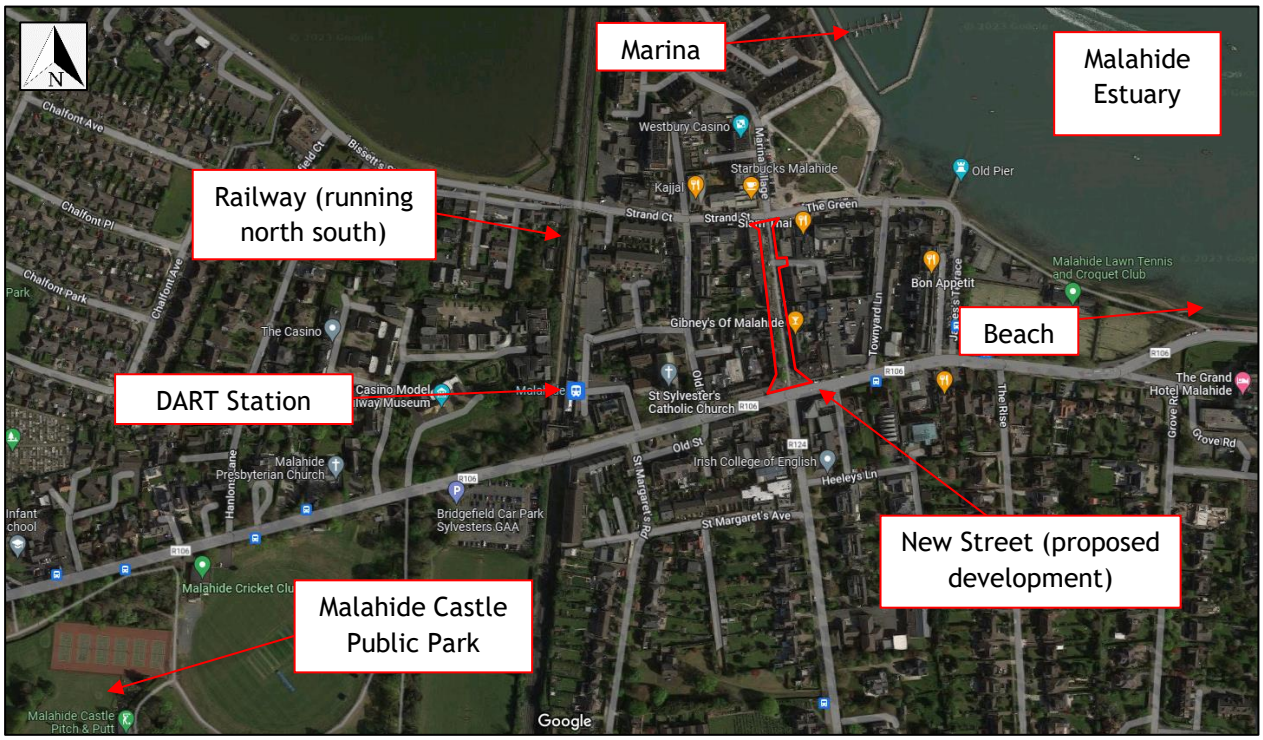

Figure 3-1: Site Location Plan (Ref Google Maps)

3.2 Existing Road Network

The site location in relation to the wider road network is detailed in Figure 3-2, Figure 3-3 and Figure 3-4.

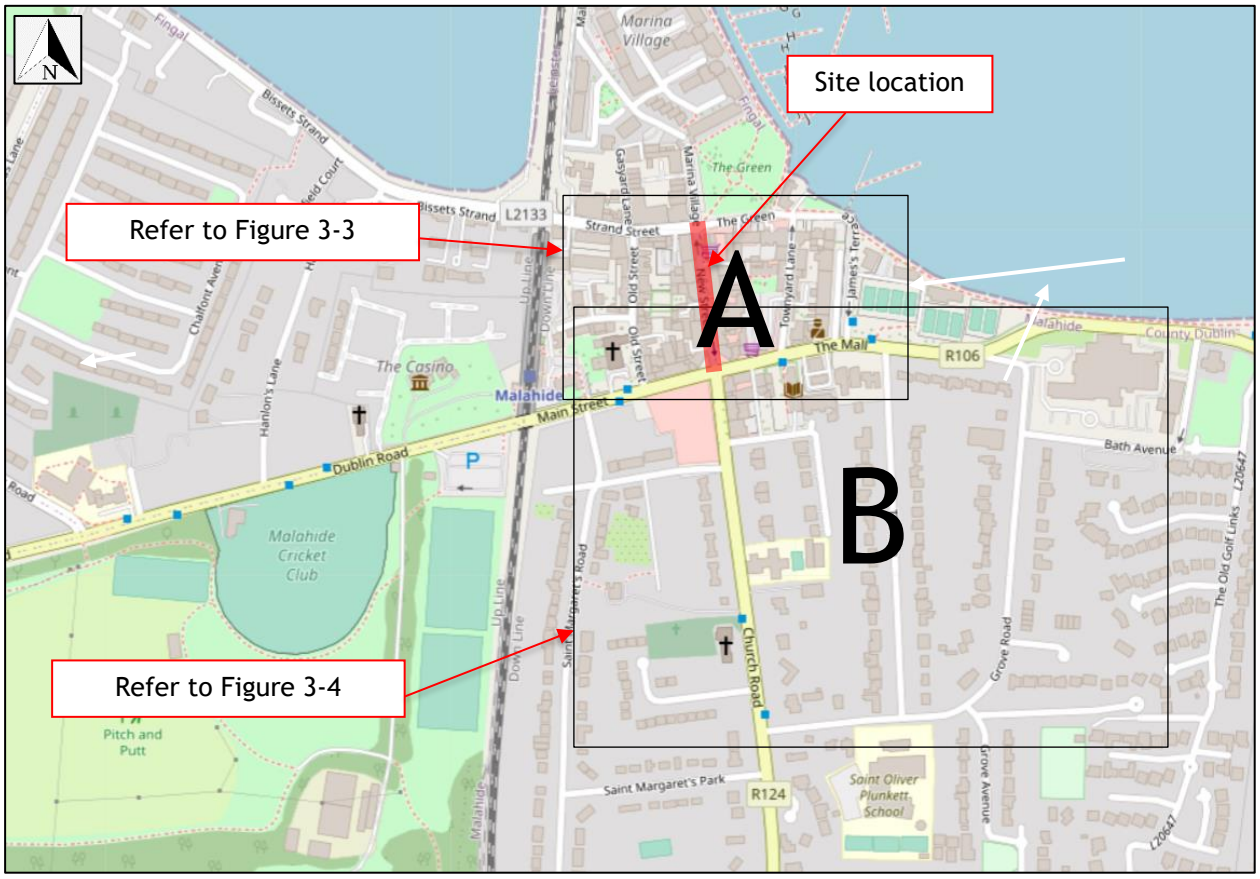

Figure 3-2: Overview - Site location and surrounding road network (Ref openstreetmap.org)

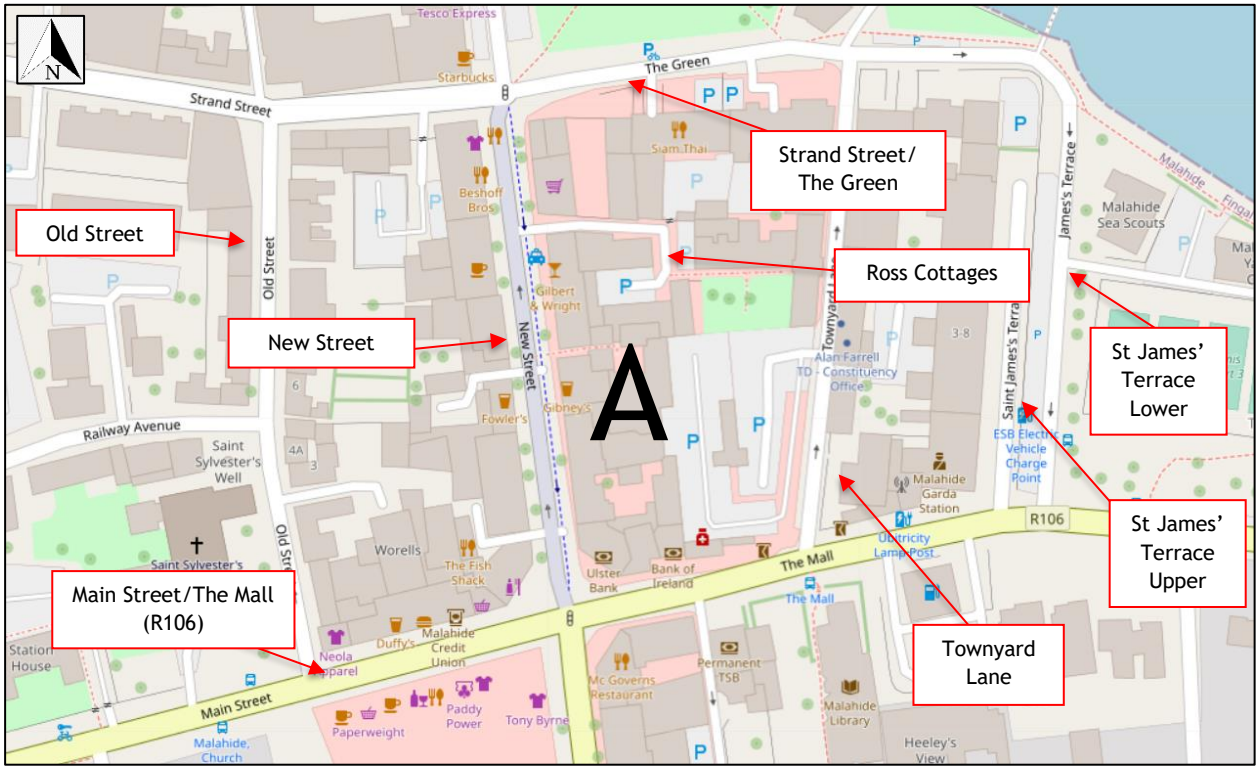

Figure 3-3: Detail A - Site location and surrounding road network (Ref openstreetmap.org)

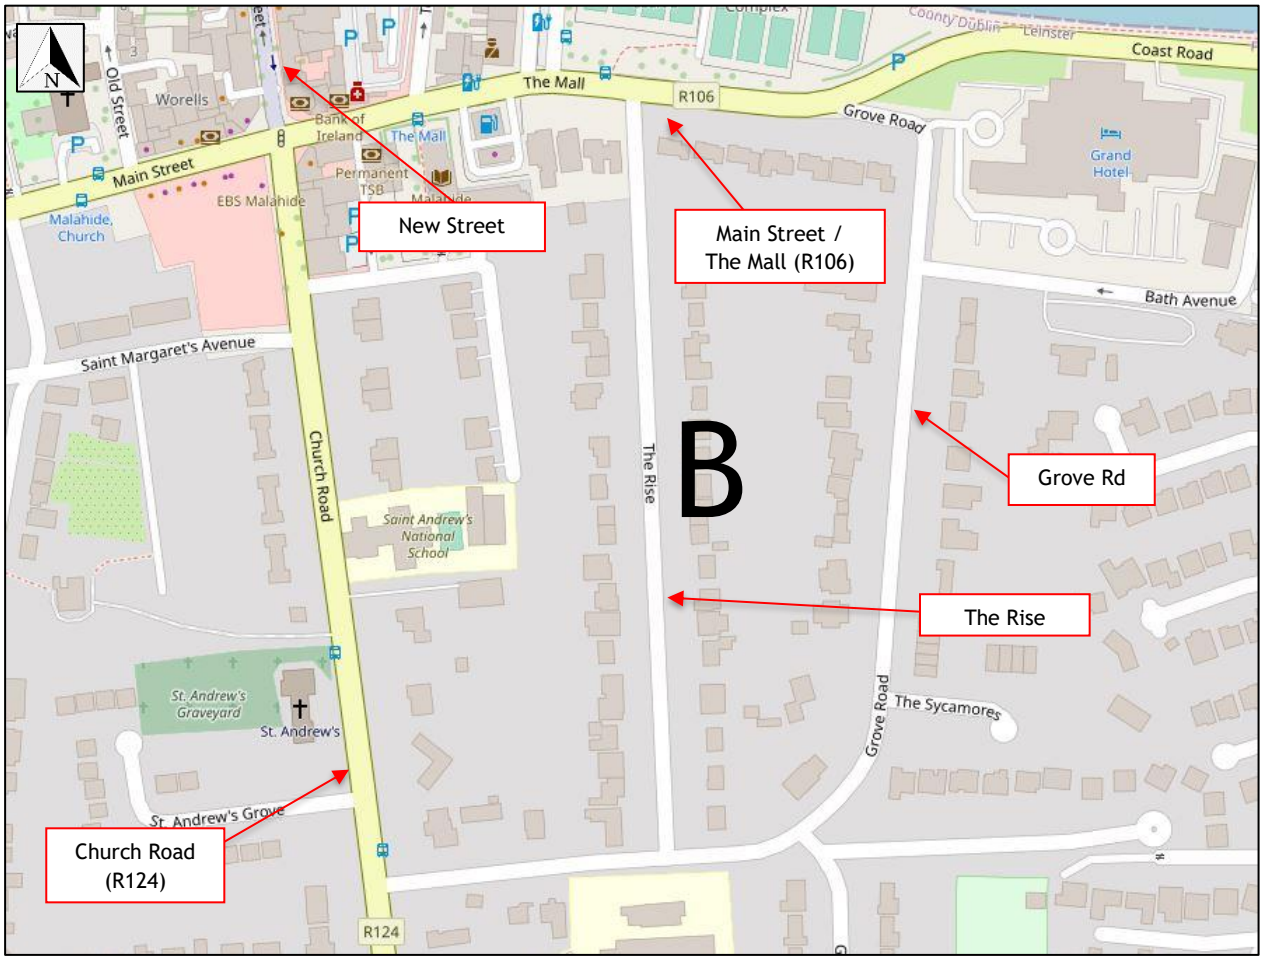

Figure 3-4: Detail B - Site location and surrounding road network (Ref openstreetmap.org)

A brief description of the local road network and the major road junctions is provided below:

3.2.1 New Street

New Street links Main Street/The Mall with Strand Street/The Green. Refer to Figure 3-5 and Figure 3-6. New Street is approximately 150m in length, with signal-controlled junctions at either end:

- T155 Malahide, the "Diamond" junction (South end)
- T372 Malahide Marina / Strand Street junction (North end)

The street has an average width of approximately 14m, with 1.7m wide separated footpaths to the west, and 1.2m separated footpaths to the east. The street is orientated north/south, with 37 No. premises facing onto it, with a combination of residential, commercial, boutique shops, retail, cafe, restaurants, pubs, health services, garden centre, banking outlets and a Mall, with a variety of uses.

New Street consists of a one-way restricted vehicular traffic system (northbound). Deliveries are permitted from 7am-11am each day, with bollards at the Diamond installed at 11am and removed at 7am each day. Additionally, the street currently provides unrestricted vehicular access to Ross Cottages (from the north) which has 3 residential cottages, a residential apartment; and parking for each of these residents as well as for 3 no. Residents on New Street.

New Street was first pedestrianised by Fingal County Council (FCC) in September 2019. The pedestrianisation was successfully carried out as part of FCC's Car Free Day. The pedestrianisation was introduced in June 2020 and continued until December 2020, following the mandate issued by Government for the prioritisation of urban spaces to pedestrians and cyclists during the Covid-19 pandemic.

This arrangement was modified again from December 2020 until June 2021 to a one-way system (northbound from the Diamond to Strand St.) for vehicular traffic with a contra flow cycle lane.

Prior to June 2020), New Street was a single way two-way carriageway with footpaths on either side of the carriageway and no designated cycle lanes. Refer to Figure 3-7 for a view of the original layout prior to pedestrianisation.

3.2.2 Main Street/The Mall (R106)

The Mall (R106) is a regional road in the North Dublin area. It runs from Sutton towards Swords, passing through Malahide. The Mall (R106) connects with the southern tip of New Street at The Diamond, a signal-controlled crossroads. Refer to Figure 3-8 and Figure 3-9.

The Mall (R106) is a single lane two-way carriageway with wide footpaths on either side of the carriageway and no designated cycle lanes. There is a bridge crossing over the railway line approximately 200m west of the site, refer to Figure 3-10.

Figure 3-9: The Mall - R106 (Looking East) at the junction with Townyard Lane [Junction 5]. © Google Maps

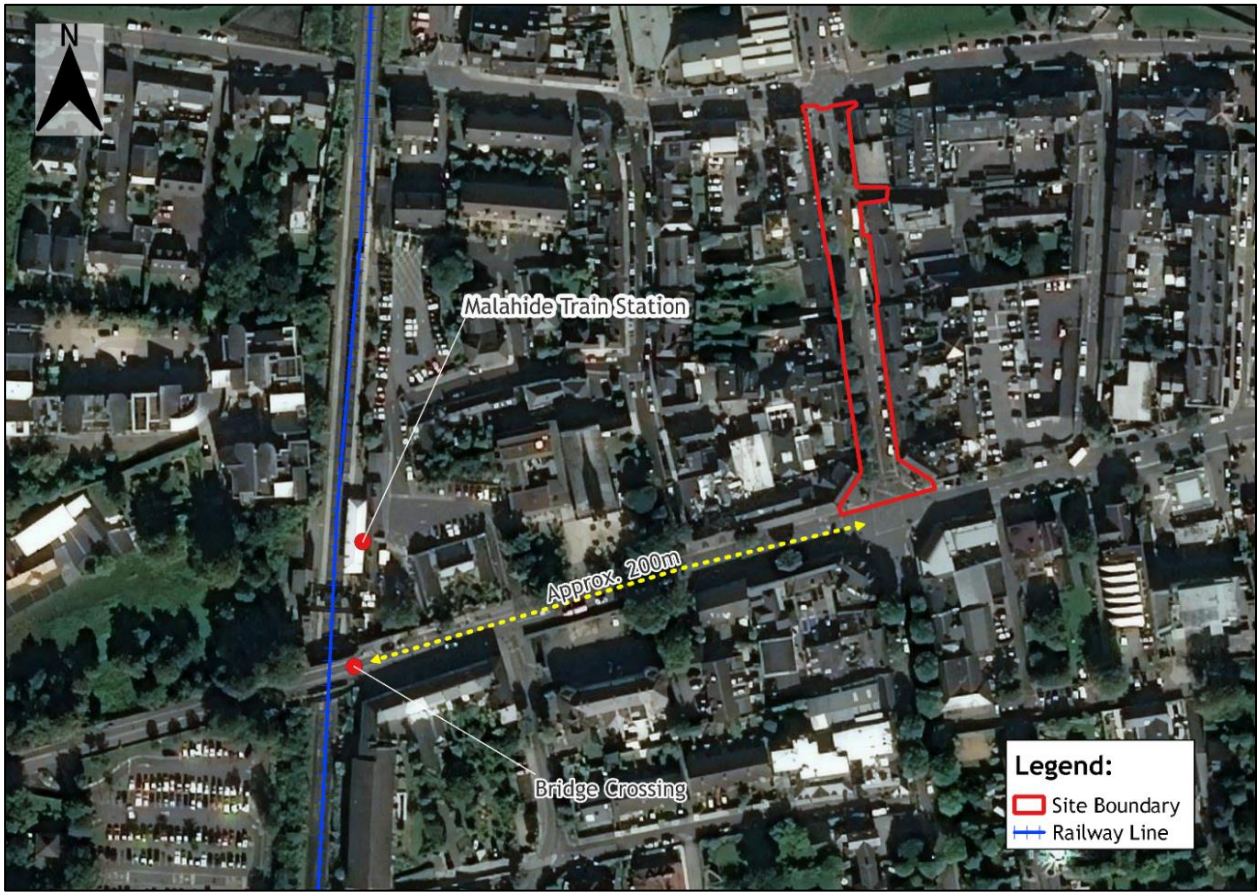

Figure 3-10: Bridge Crossing on The Mall (R106). Ref Google Maps

3.2.3 Strand Street/The Green

Strand Street/The Green is the link between James's Terrace to the east and Bissett's Strand to the West. Strand Street connects with the northern tip of New Street at a signal-controlled crossroads. Refer to Figure 3-11. Strand Street is a single lane two-way carriageway with footpaths on either side of the carriageway and no designated cycle lanes.

Figure 3-11: Strand Street (Looking East) [Junction 1]. © Google Maps

3.2.4 Townyard Lane

Townyard Lane is the link between The Mall (R106) to the south and The Green to the north. Refer to Figure 3-12 and Figure 3-13. Townyard Lane is a single lane one-way (northbound) vehicle traffic system with footpaths on either side of the carriageway and no designated cycle lanes.

Figure 3-12: Townyard Lane (Looking North) © Google Maps

Figure 3-13: Townyard Lane (Looking North) [Junction 3]. © Google Maps

3.2.5 Old Street

Old Street is another link between the Dublin Road/The Mall (R106) and Strand Street, with existing residential/ retail developments on either side of the street. Old Street is a single lane one-way (northbound) vehicle traffic system with parking on either side, wide footpaths on either side of the carriageway and no existing designated cycle lanes. Refer to Figure 3-14 and Figure 3-15.

Figure 3-14: Old Street (Looking North) at junction with Strand Street [Junction 2]. © Google Maps

Figure 3-15: Old Street (Looking North) from Main Street [Junction 6]. © Google Maps

3.2.6 St. James' Terrace

St. James's Terrace is the link between Strand Street/The Green and The Mall (R106). St. James's Terrace is a single lane one-way vehicle traffic system (southbound), with designated car/cycle parking, and footpaths either side of the carriageway. Refer to Figure 3-16 and Figure 3-17. St. James's Terrace has no designated cycle lanes.

Figure 3-16: St. James's Terrace (Looking South). © Google Maps

Figure 3-17: St. James's Terrace (Looking South) at junction with R106 [Junction 7]. © Google Maps

3.2.7 Church Road (R124)

Church Road is the regional road R124 extending to Donaghmede from Malahide. It is a link between Grove Road to the south and The Diamond to the north. Refer to Figure 3-18. Church Road is a single lane two-way carriageway with wide footpaths on both sides of the carriageway and no existing designated cycle lanes. It has a bus stop and pay and display parking.

Figure 3-18: Church Road Lane (Looking North) at St Andrews NS located on the right. © Google Maps

3.2.8 Grove Road

Grove Road is the link between the R106 (Coast Road) to the north and the R124 (Church Road) to the south west. Refer to Figure 3-19, Figure 3-20, Figure 3-21 and Figure 3-22. Grove Road is a single lane two-way carriageway with wide footpaths on both sides of the carriageway and no existing designated cycle lanes.

Figure 3-19: Grove Road (Looking West) at the junction with the R124 [Junction 11]. © Google Maps

Figure 3-22: Grove Road (Looking West) at the junction with The Mall (R106) [Junction 9]. © Google Maps

3.2.9 The Rise

The Rise is the link between Grove Road to the south and The Mall (R106) to the north. Refer to Figure 3-23 and Figure 3-24. The Rise is a single lane two-way carriageway with wide footpaths on both sides of the carriageway and no existing designated cycle lanes.

Figure 3-23: The Rise (Looking North). © Google Maps

Figure 3-24: The Rise (Looking North) at the junction with The Mall [Junction 8]. © Google Maps

3.3 Existing Traffic Flows

Classified turning count traffic surveys of the existing junctions were completed by Idaso on Tuesday 10th January 2023 on behalf of the client at various sites. Furthermore, a number of traffic surveys were also completed by ITS across a number of the same sites on Wednesday 9th October 2019 (AM only), Tuesday 12th December 2019, as well as on Wednesday 15th July 2020. Refer to Table 3-1 for a summary.

The locations of the surveyed junctions/sites are shown in Figure 3-25, Figure 3-26 and Figure 3-27. The traffic survey locations and full traffic survey results are included in Appendix A.

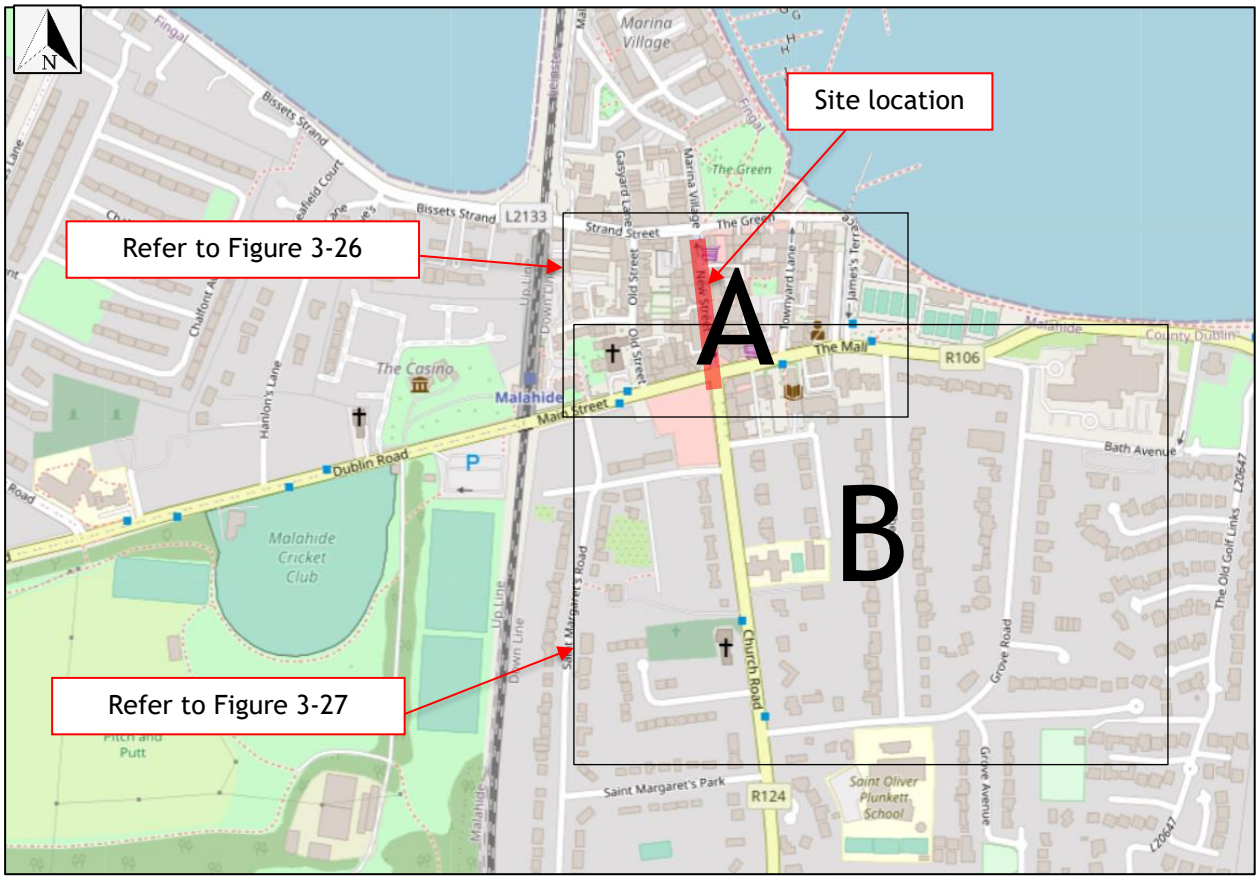

Figure 3-25: Overview – Junction/site locations (Ref openstreetmap.org)

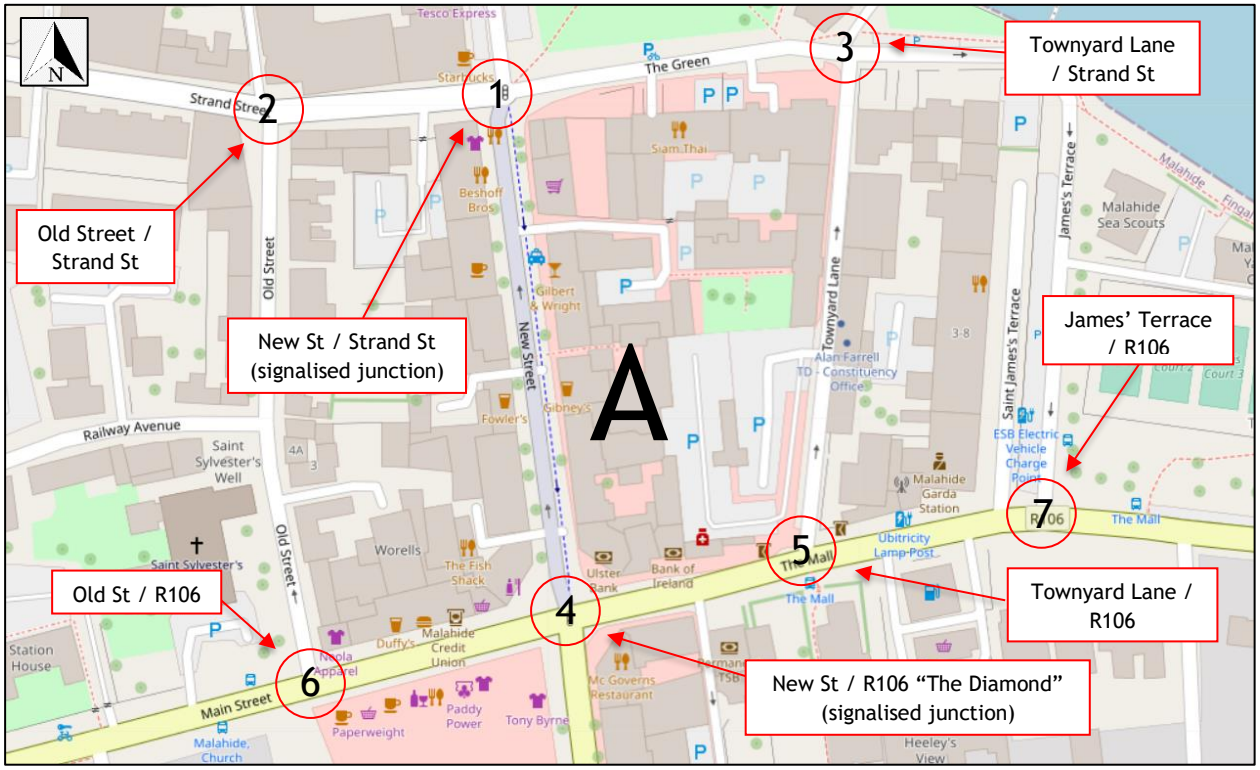

Figure 3-26: Detail A - Junction/site locations (Ref openstreetmap.org)

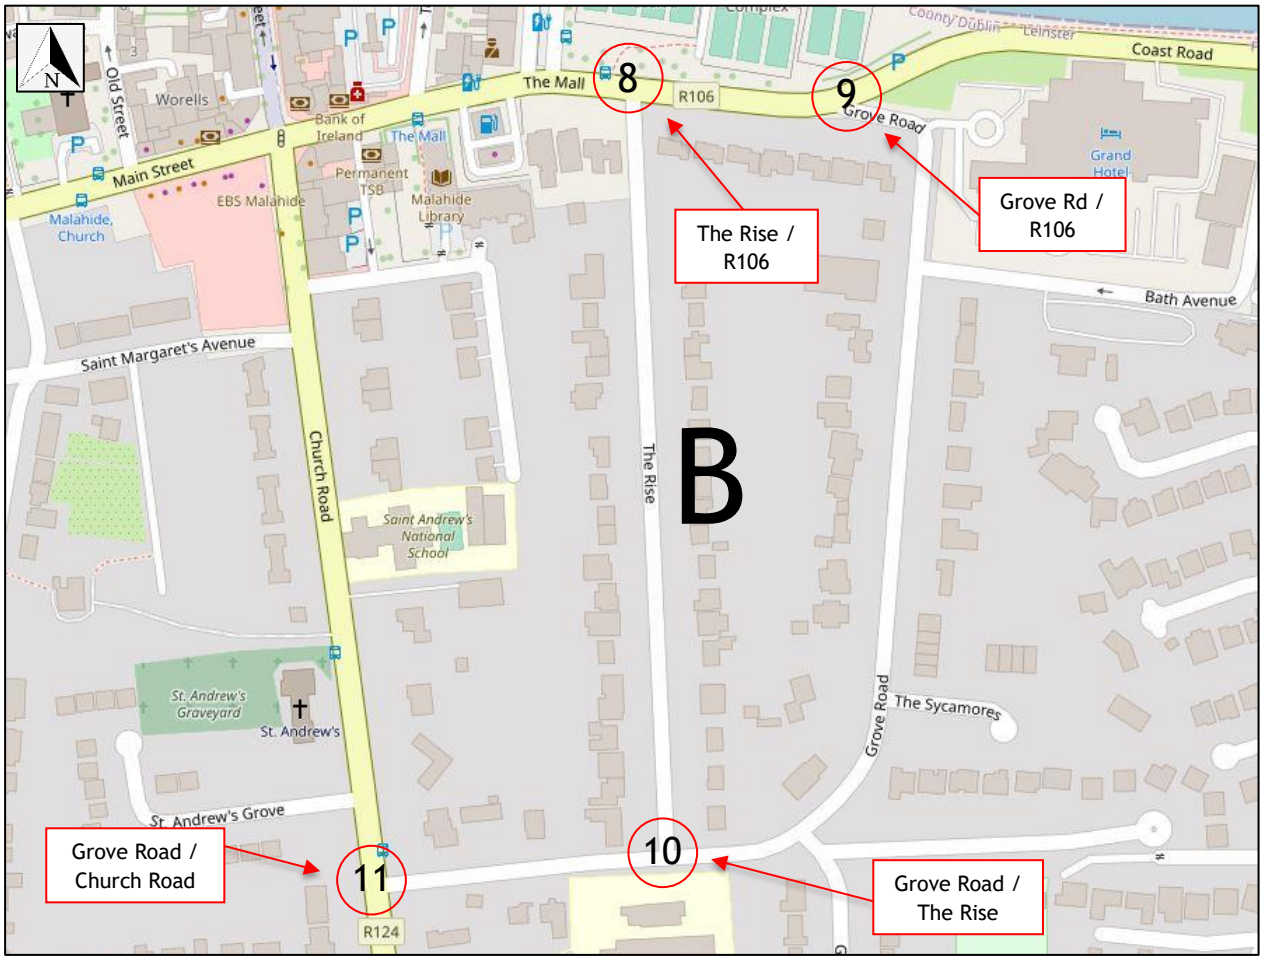

Figure 3-27: Detail B - Site location and surrounding road network (Ref openstreetmap.org)

Junction reference	Site	Survey year(s)		
1	Junction of New Street and the Strand *(signalised junction)*		2020	2023
2	Junction of Old Street and the Strand		2020	2023
3	Junction of Townyard Lane and the Strand			2023

Table 3-1: Summary of traffic survey site locations and years completed

3.3.1 Junction 1 – New Street and the Strand (signalised junction)

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 1 generally occurred between 08:15 and 09:15 (AM). The evening peak hour flow was found to be between 16:45 and 17:45 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-28.

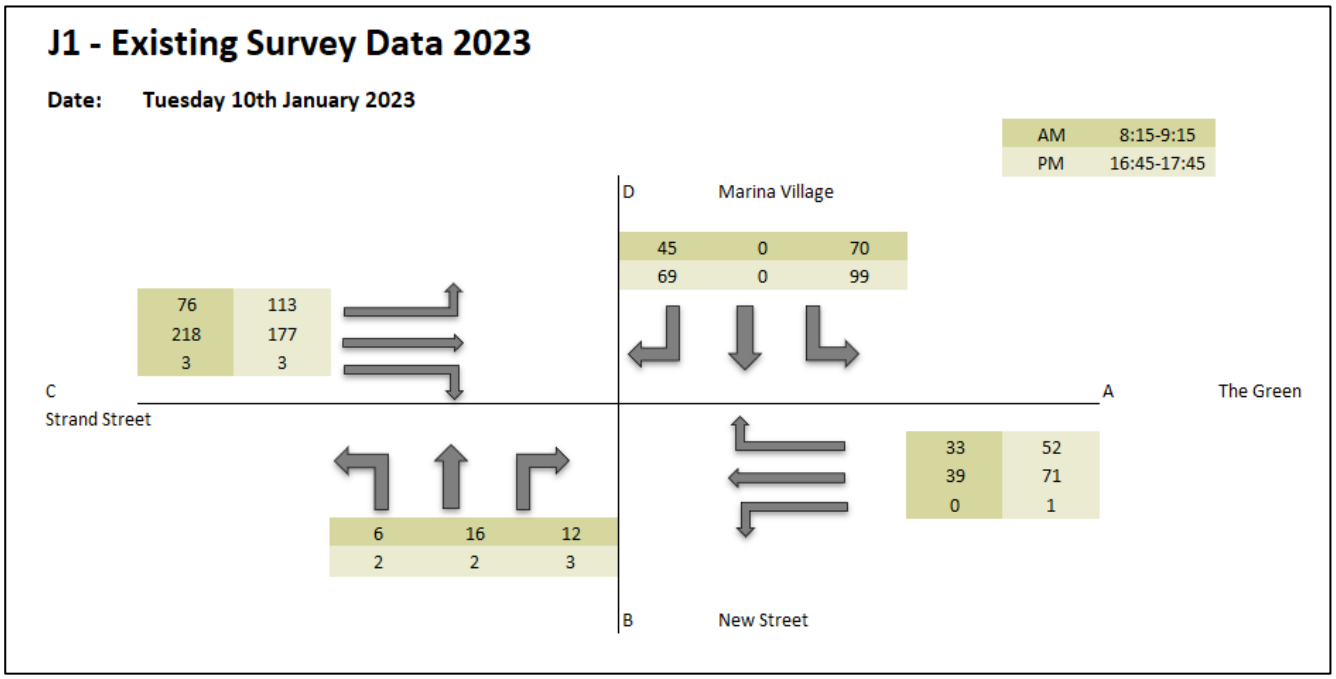

Figure 3-28:January 2023 Peak Hour Traffic Survey Results Junction 1 (PCUs)

3.3.2 Junction 2 - Old Street and the Strand

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 2 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 17:00 and 18:00 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-29.

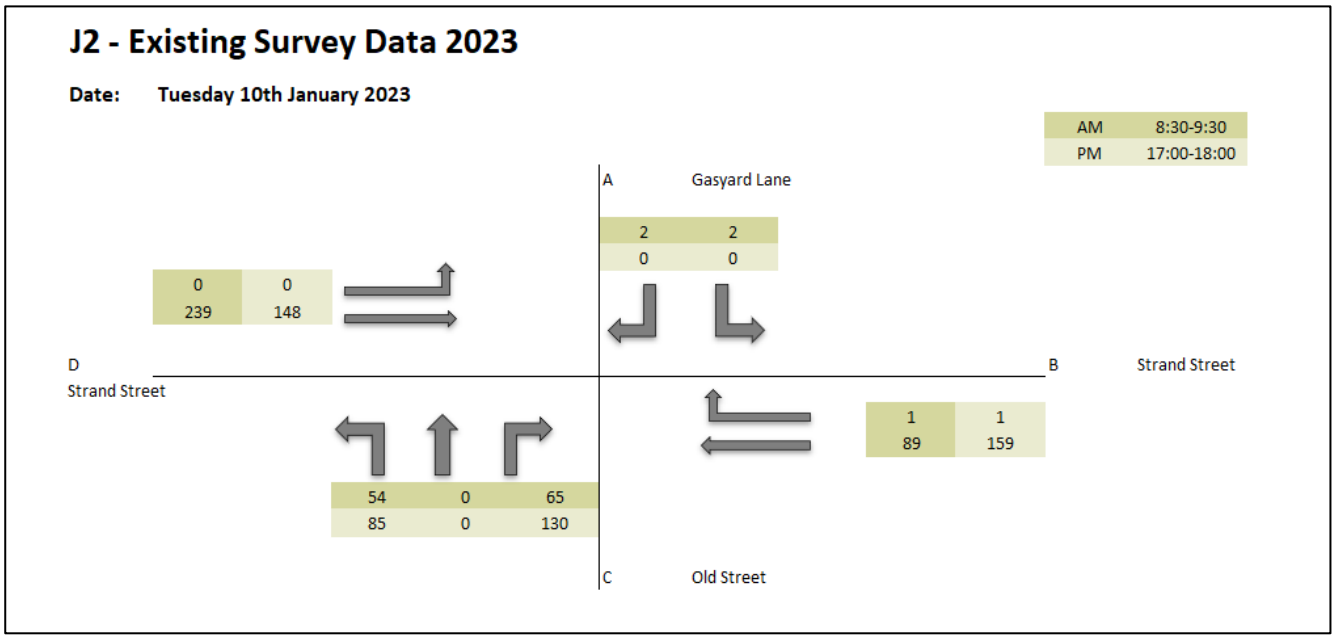

Figure 3-29: January 2023 Peak Hour Traffic Survey Results Junction 2 (PCUs)

3.3.3 Junction 3 – Townyard Lane and the Strand

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 3 generally occurred between 10:30 and 11:30 (AM). The evening peak hour flow was found to be between 16:45 and 17:45 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-30.

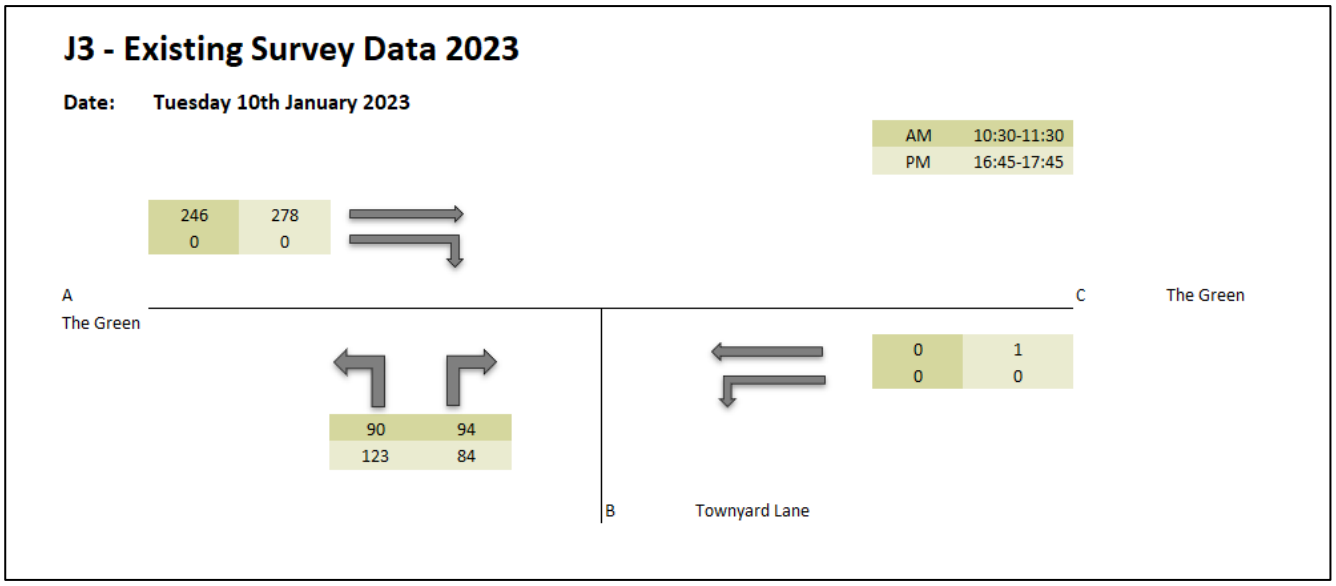

Figure 3-30: January 2023 Peak Hour Traffic Survey Results Junction 3 (PCUs)

3.3.4 Junction 4 – The Diamond - New Street and the R106 (signalised junction)

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 4 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 15:45 and 16:45 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-31.

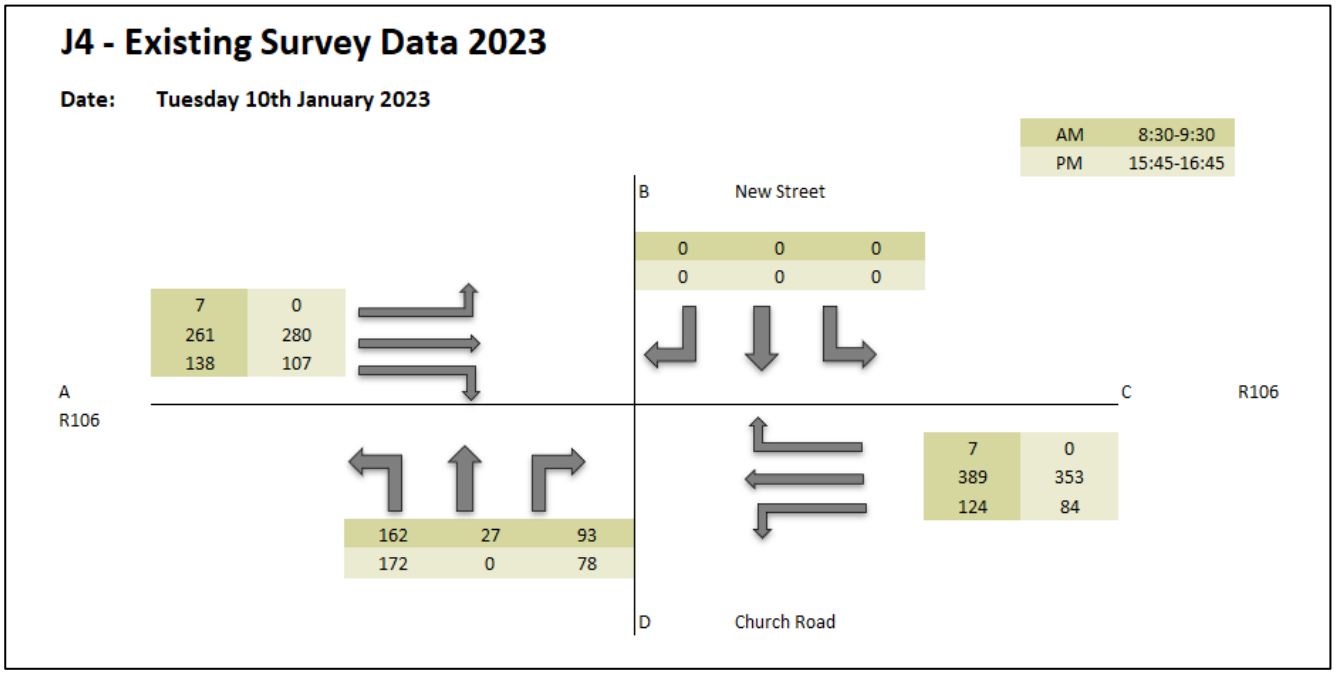

Figure 3-31: January 2023 Peak Hour Traffic Survey Results Junction 4 (PCUs)

3.3.5 Junction 5 – Townyard Lane and The Mall (R106)

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 5 generally occurred between 08:45 and 09:45 (AM). The evening peak hour flow was found to be between 13:00 and 14:00 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-32.

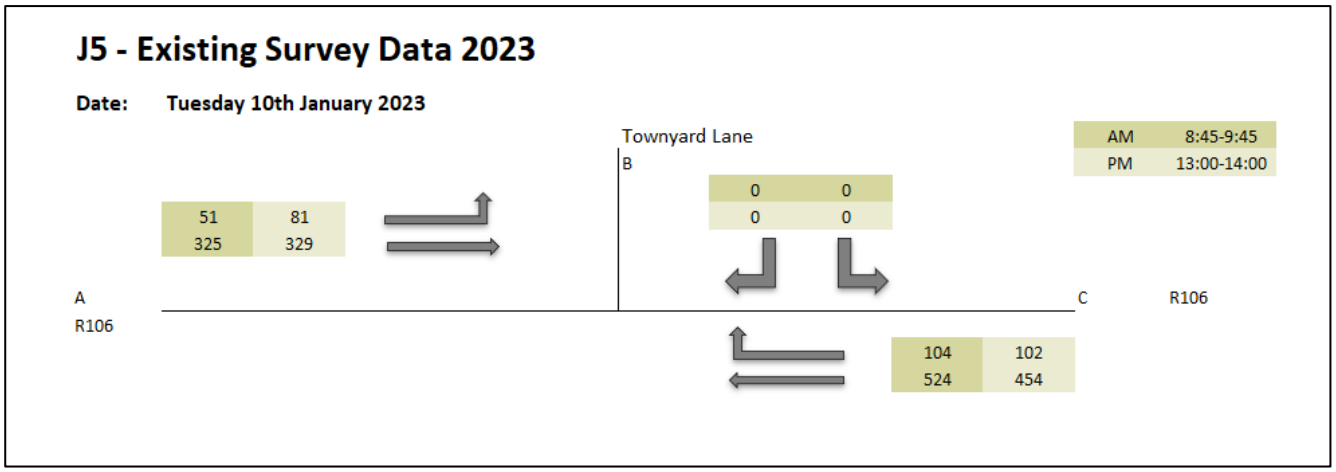

Figure 3-32: January 2023 Peak Hour Traffic Survey Results Junction 5 (PCUs)

3.3.6 Junction 6 – Old Street and the R106

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 6 generally occurred between 08:15 and 09:15 (AM). The evening peak hour flow was found to be between 15:45 and 16:45 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-33.

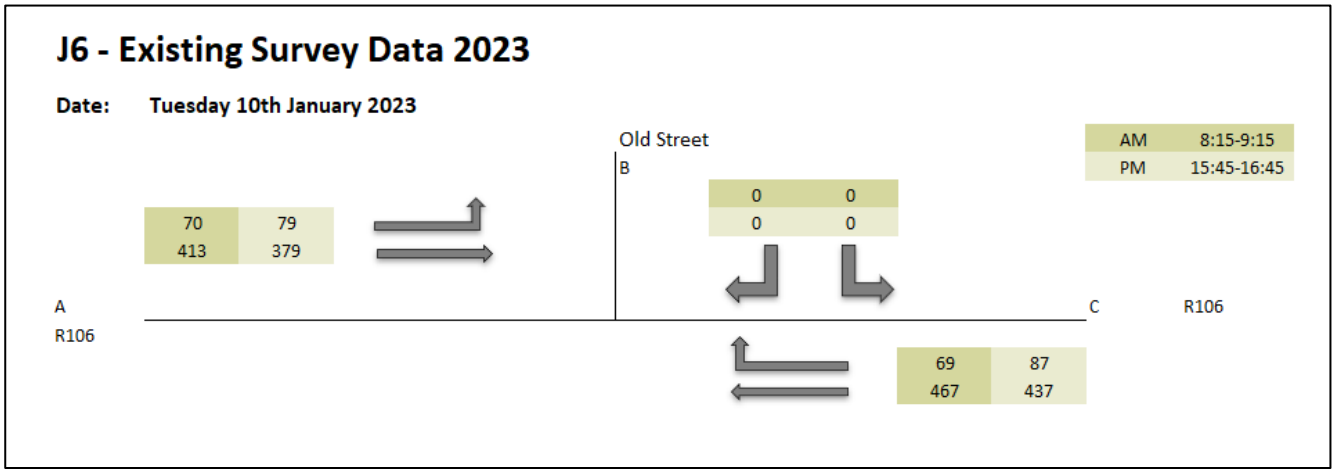

Figure 3-33: January 2023 Peak Hour Traffic Survey Results Junction 6 (PCUs)

3.3.7 Junction 7 – James' Terrace and the R106

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 7 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 16:30 and 17:30 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-34.

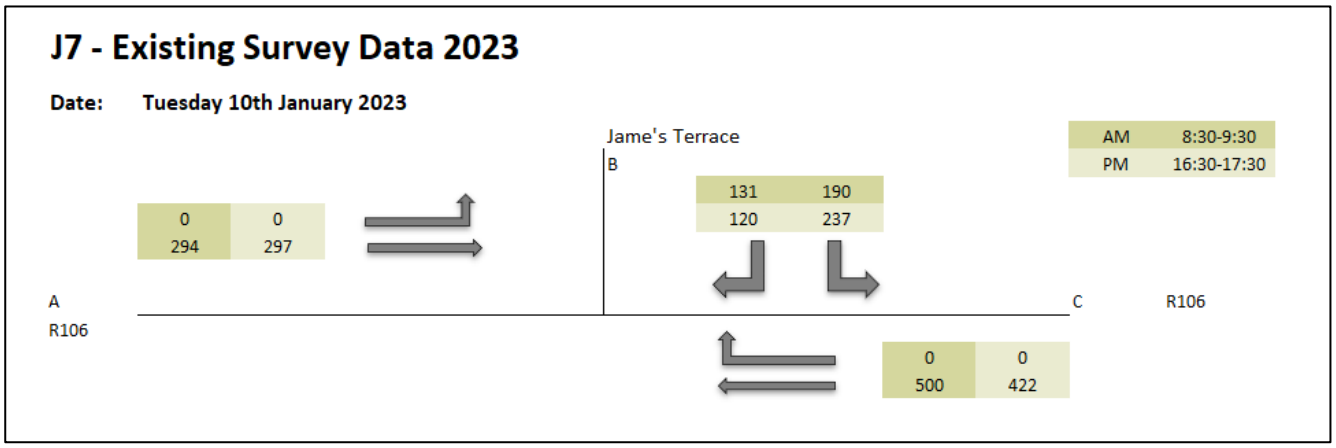

Figure 3-34: January 2023 Peak Hour Traffic Survey Results Junction 7 (PCUs)

3.3.8 Junction 8 – The Rise and the R106

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 8 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 16:30 and 17:30 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-35.

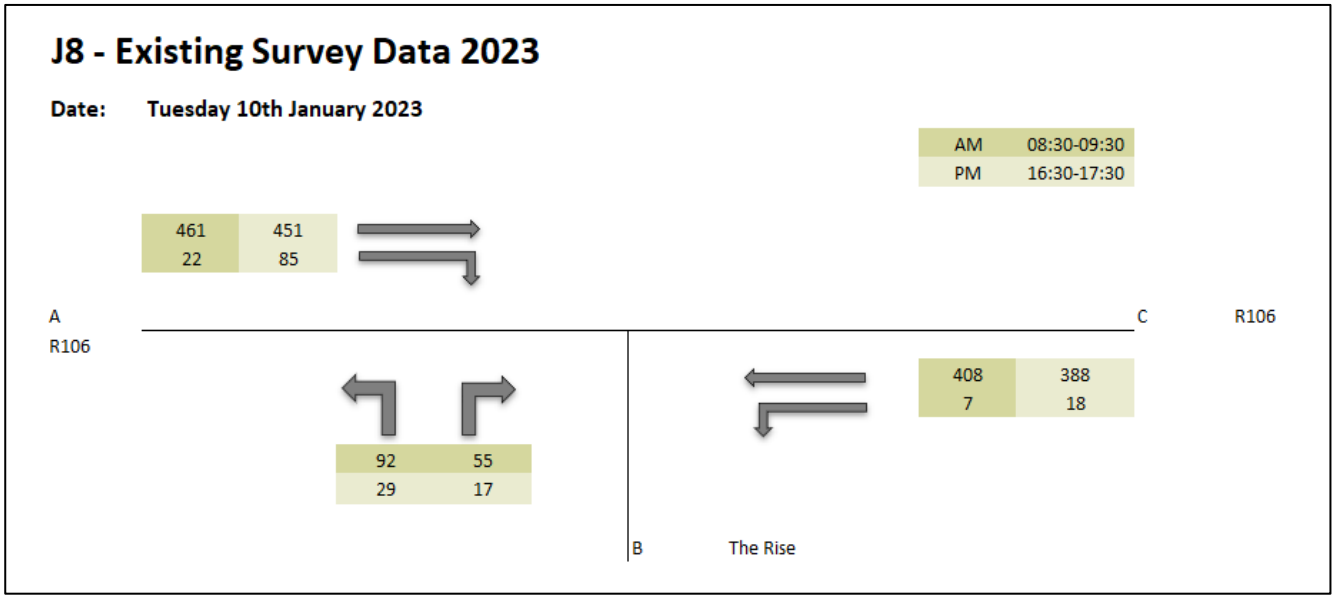

Figure 3-35: January 2023 Peak Hour Traffic Survey Results Junction 8 (PCUs)

3.3.9 Junction 9 – Grove Road and the R106

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 9 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 16:30 and 17:30 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure 3-36.

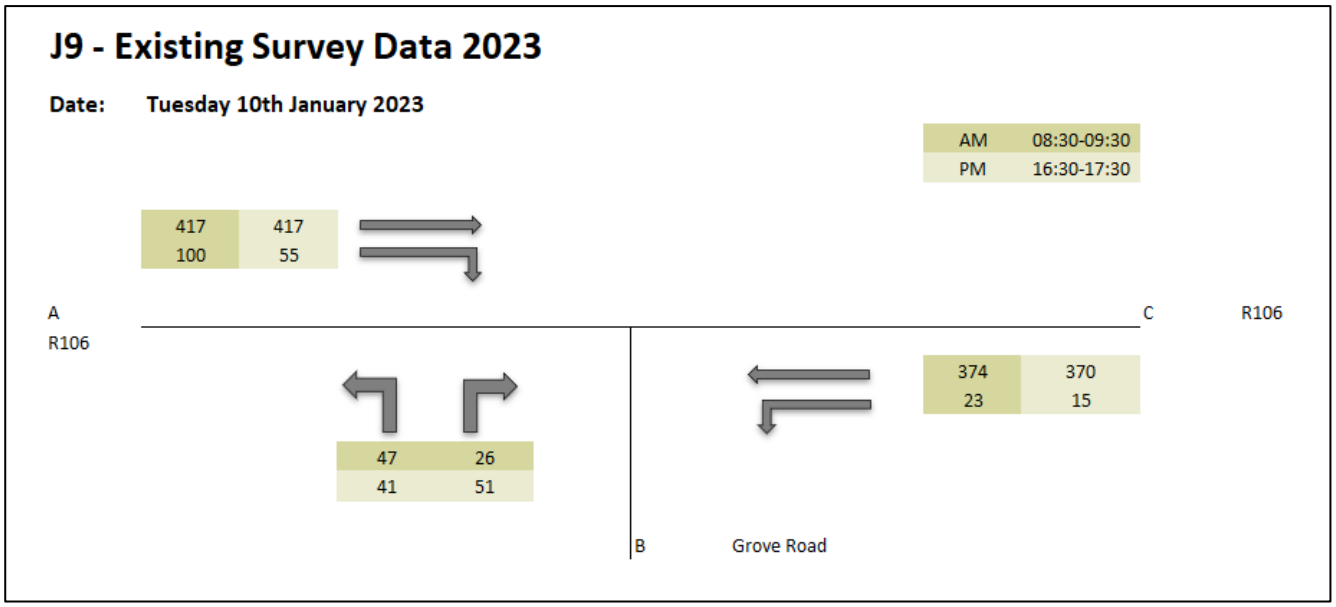

Figure 3-36: January 2023 Peak Hour Traffic Survey Results Junction 9 (PCUs)

3.3.10 Junction 10 – Grove Road and the Rise

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 10 generally occurred between 08:15 and 09:15 (AM). The evening peak hour flow was found to be between 16:30 and 17:30 (PM). The 2023surveyed peak hour turning PCUs are presented in Figure 3-37.

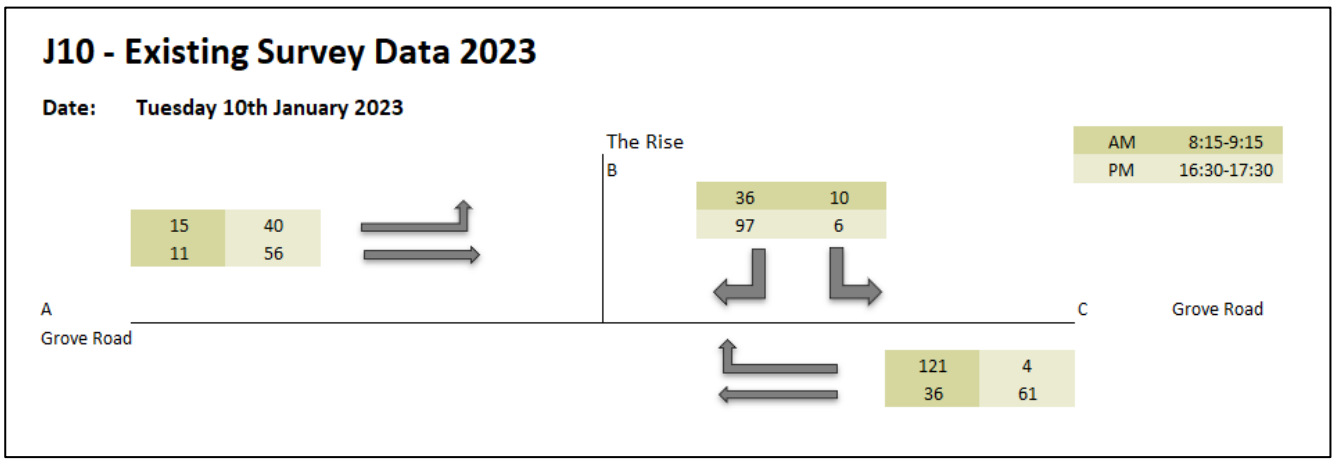

Figure 3-37: January 2023 Peak Hour Traffic Survey Results Junction 10 (PCUs)

3.3.11 Junction 11 – Grove Road and Church Road

The traffic surveys undertaken found that the mean morning peak hour traffic flow at Junction 11 generally occurred between 08:30 and 09:30 (AM). The evening peak hour flow was found to be between 15:45 and 16:45 (PM). The 2023 surveyed peak hour turning PCUs are presented in Figure **3-38**.

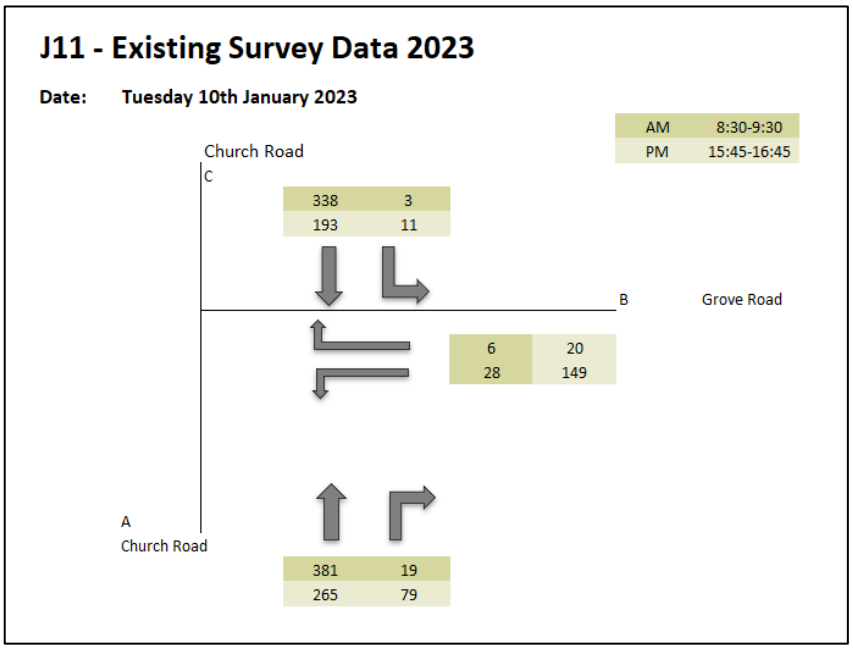

Figure 3-38: January 2023 Peak Hour Traffic Survey Results Junction 11 (PCUs)

3.4 Future Transport Proposals

The site is located in the Fingal Development Plan 2023 – 2029. There are no proposed road upgrades in the vicinity of the site, however the Development Plan outlines indicative cycle/pedestrian routes on The Mall (R106) at the southern border of New Street, as shown in Figure 3-39 and 3-40 below. The Greater Dublin Area (GDA) Cycle Network is also proposed on The Mall (R106).

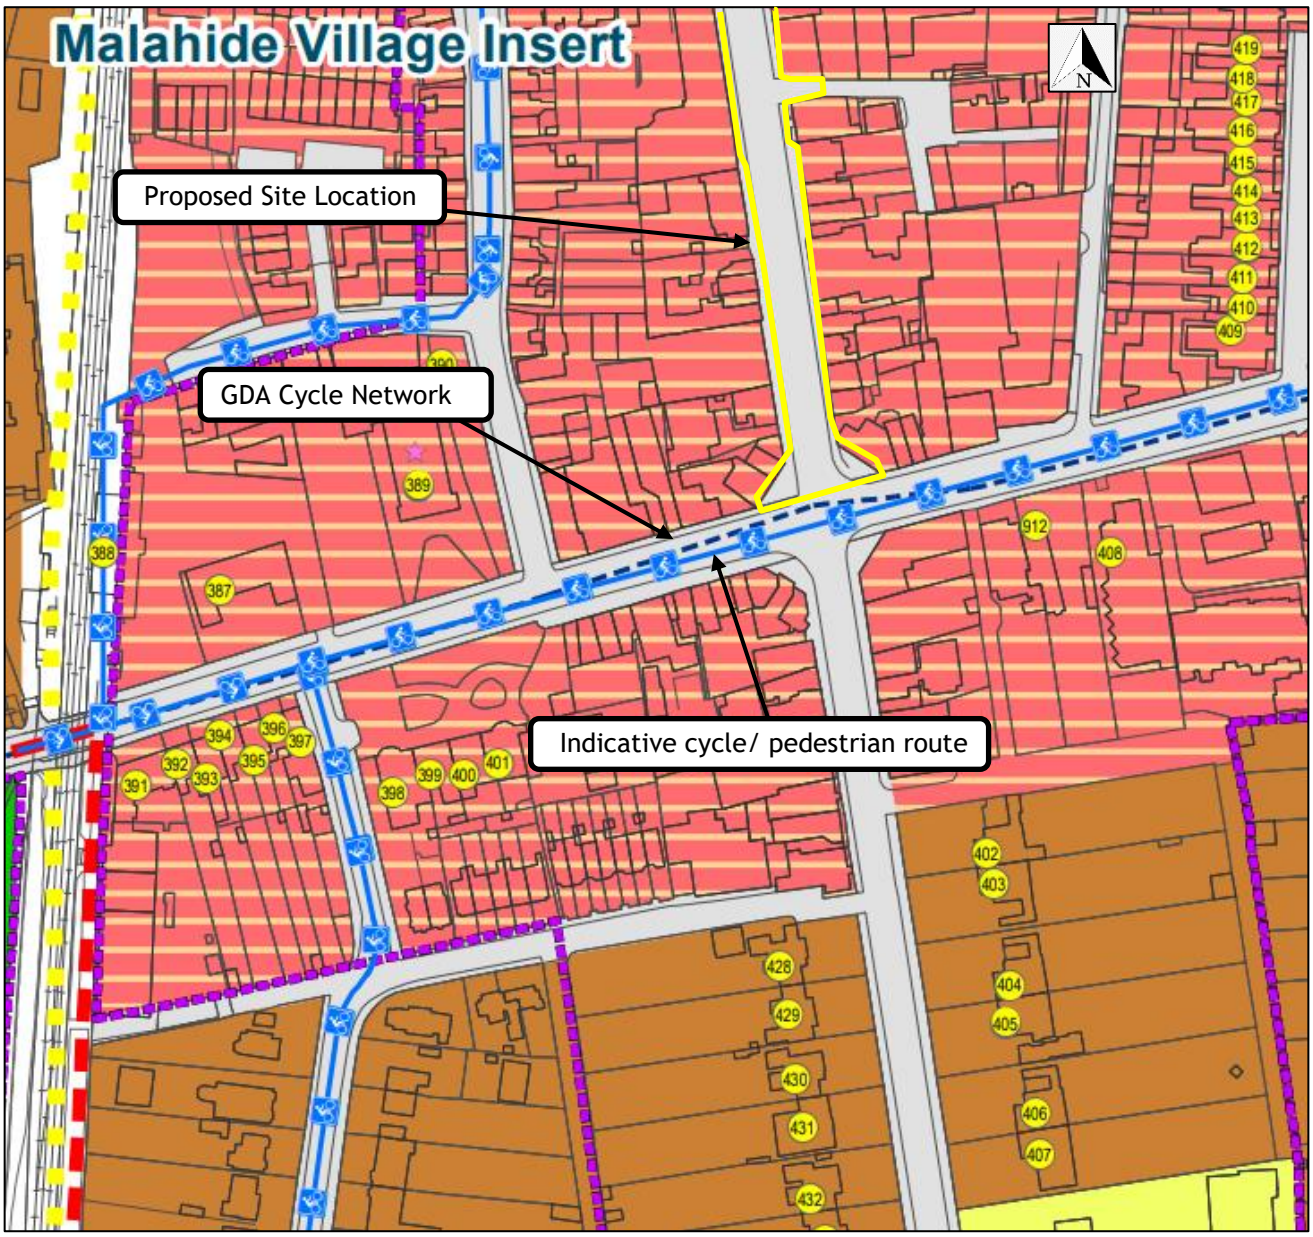

Figure 3-39: Extract from Sheet No.9 from Fingal Development Plan 2017 - 2023.

Figure 3-40: Extract from Fingal Development Plan 2023 - 2029 Interim Publication.

General proposals and objectives as noted in the Development Plan are to reduce car dependency and promote walking and cycling as sustainable modes of transport. The inclusion of indicative cycle/ pedestrian routes and the GDA Cycle Network proposed on The Mall (R106) at the southern end of New Street will improve connectivity to the site.

The land on which the development is proposed is currently a public street and therefore not defined by a land zoning. It is noted that the lands adjacent to either side of New Street are zoned as "TC: Town and District Centre" in the Fingal Development Plan 2023 – 2029 Interim Publication. Refer to Figure 3-39 and Figure 3-40.

4 Proposed Public Realm Improvements

4.1 Description of Proposals

The proposed public realm improvements will comprise: -

i. Widening of footpaths and provision of new kerb edges with existing kerbstones retained, realigned and protected within the widened footpaths and public spaces.
ii. Realignment and narrowing of the trafficable section of New Street (c.150m in length, 0.22ha) and insertion of control measures and all necessary signage to provide for a pedestrianised street with associated traffic flow routes and restrictions allowing for time limited one-way access from 7am to 11am each day for deliveries and emergency vehicles from Main Street/ The Mall to New Street and a two-way access from Strand Street to Ross's Terrace via New Street.
iii. Upgrade of all street surfaces.
iv. Provision of 2no. loading bays at the southern and northern ends of New Street and an accessible parking space in front of the HSE building.
v. Installation of cycle stands at 6no. locations on New Street with capacity for 23no. cycle parking spaces.
vi. Removal and replacement of 11no. existing trees with 37no. trees of species appropriate to the location and environment and provision of soft landscaping and green infrastructure with planting zones for seeded, planted and hedging areas and associated bioretention and tree pit areas.
vii. Provision of outdoor dining zones including tables and chairs and other ancillary moveable structures.
viii. Provision of street furniture including seating, benches and litter and recycling bins and a water feature.
ix. New public lighting.
x. Upgrade of the watermain and foul drainage networks and upgrade and relocation of the surface water drainage network including provision of sustainable urban drainage systems (SUDs) features as part of hard and soft landscaping.
xi. Provision of ducting for existing and future utilities and piped infrastructure.
xii. All associated site and development works.

Fingal County Council will be providing regulatory traffic signs in accordance with Section 95 of the Road Traffic Act 1961 (as amended).

The proposed layout for the public realm improvements is detailed in the series of drawings by DFLA Landscape Architects accompanying this report and an extract is included in Figure 4-1.

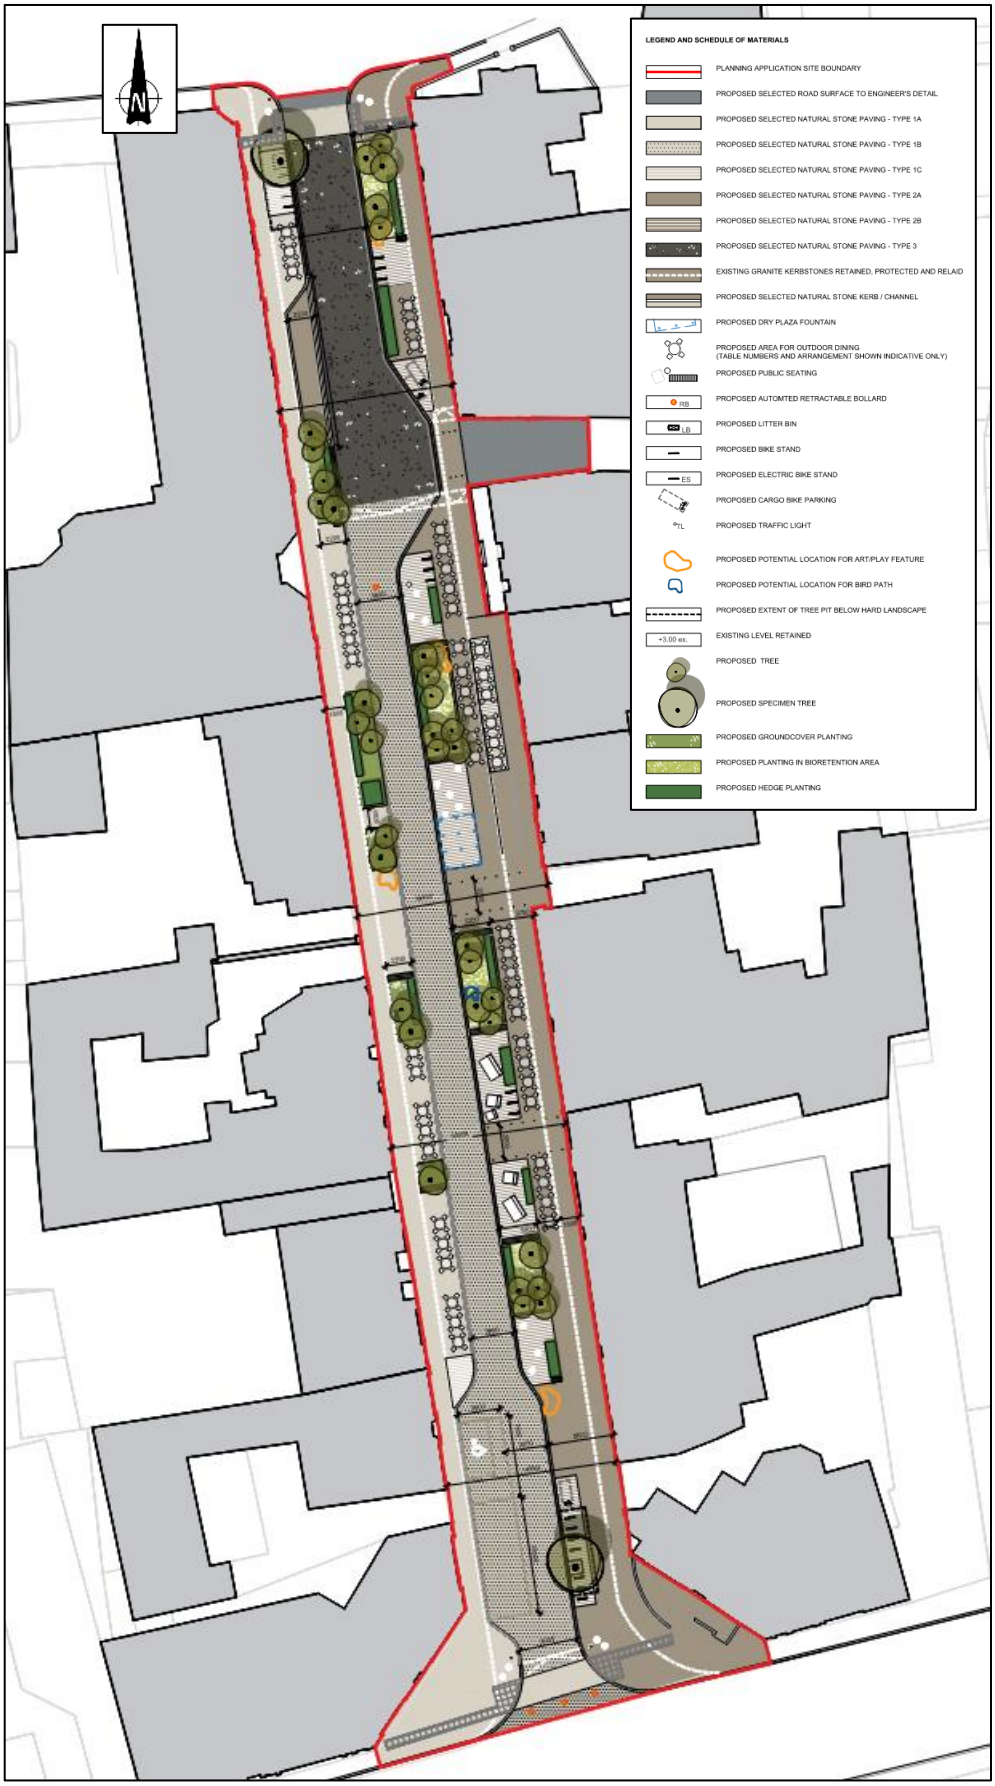

Figure 4-1: Proposed Site Layout (© DFLA)

5 Traffic Forecasting

As discussed in section 4, the proposed public realm improvements for a pedestrianised of New Street has already taken place. Survey data taken in 2019 for a number of junctions was consulted as listed in Table 3-1. In the absences of survey data for all junctions, a growth factor was required in order to estimate 2019 flows based on actual 2023 data.

In the absence of any specific local traffic growth information, it was assumed that baseline traffic grew from 2019 to 2023 at the levels recommended by the TII in the Project Appraisal Guidelines (PAG) – Unit 5.3 - Travel Demand Projections publication by the TII (Oct 2021). The Project Appraisal Guidelines describe three levels of transport model functionality. The static model, which reflects traffic volumes on the basis of link flows, is best suited to the proposed development. Such models do not attempt any route assignment, and hence are applicable for networks where no change in traffic flows will result from a proposed scheme. We have used figures from Table 6.2 'Link-Based Growth Rates' for the Dublin County area.

The 2019 survey year for which the growth was applied would give a 4-year period of growth. This was applied in reverse order i.e. from 2023 back to 2019.

The central growth factors from the Project Appraisal Guidelines – Unit 5.3 publication are appropriate and are detailed below:

- TII Link Based Growth Rates: Annual Growth Factor for 2016-2030 = 1.018 (LVs) and 1.0317 (HVs);

With regards to the volume of traffic using the road, generally the passenger car is adopted as the standard unit and other vehicles are assessed in terms of PCU's. Cars and Light Goods Vehicles are grouped together as Light Vehicles (LV). All other Goods Vehicles, Buses and Coaches are defined as Heavy Vehicles (HV).

6 Trip Assignment and Distribution

There will be no increase in traffic generated by the proposed public realm improvements. However, as cars can no longer use New Street, vehicular traffic will be redistributed to other junctions in the area.

The redistribution of traffic was considered on a junction-by-junction basis. Refer to section 7 of this report for the methodology used at each junction. An overall network flow diagram closest to New Street has been included in Appendix M. (Note: The 2023 diagrams are the actual flows. The 2019 diagrams contain both actual survey data where available and assumed flows calculated using TII growth rates and diverted traffic due to the Pedestrianisation of New Street.)

7 Assessment and Road Impact

The impact on the local external road network has been assessed in this TTA. The scenarios being assessed are as follows: the 2019 'pre-pedestrianisation' of New Street forms the baseline and the analysis seeks to compare this to the 2023 'post-pedestrianisation' traffic arrangements. The 2020 'post-pedestrianisation' scenario is also included for reference but is relied on to a lesser degree due to the impacts of the Covid-19 pandemic on the traffic counts.

This involved examining the traffic flows of the local road network both before and after the proposed development took place.

The morning peak period and the evening peak period have been examined in order to assess the busiest case in terms of local traffic on the road network and traffic generated by the proposed development.

7.1 Junction Analysis

Capacity analysis was carried out for the junctions listed below:

1. Junction of New Street, Strand Street, The Green, Marina Village (signalised junction)
2. Junction of Old Street and Strand Street
3. Junction of Townyard Lane and Strand Street
4. The Diamond - Junction of New Street and the R106 (signalised junction)
5. Junction of Townyard Lane and The Mall (R106)
6. Junction of Old Street and Dublin Road (R106)
7. Junction of James' Terrace and The Mall (R106)
8. Junction of the Rise and The Mall (R106)
9. Junction of Grove Road and The Mall (R106)
10. Junction of Grove Road and the Rise
11. Junction of Grove Road and Church Road

The following scenarios were analysed for all junctions:

1. Survey year: 2023
2. Survey year: 2020 (Where data was available)
3. Survey year: 2019 (Where data was available)
4. Estimated Pre-Pedestrianisation: 2019 (Where no 2019 data was available)

Linsig software was used for the analysis of the signalised junctions. The Junctions 9 software was used for priority junction analysis.

Junctions 9 Analysis Note:

The ratio of flow to capacity (RFC) is an indicator of the likely performance of a junction under design year loading. Due to site-to-site variation, there may be a standard error of prediction of the entry capacity by the formulae of + or - 15% for any site. Thus, queuing should not occur in the various turning movements in the chosen design year peak hour in 5 out of 6 peak hour periods or sites if a maximum RFC of about 85% is used. Once the RFC is at 1.0 the Junctions 9 modelling software produces results regarding queues and delays that is unrepresentative of the actual or likely effects.

LinSig Analysis Note:

The degree of saturation (DOS) is defined as the ratio of demand flow to the maximum flow which can be passed through the junction from a particular approach. If an approach is found to have a DOS greater

than 100%, then it is "over saturated" and long queues will result. The practical capacity is the level of capacity above which the junction is assumed to work inefficiently (usually taken to be 90%). Junction capacities shown below are only one theoretical interpretation of the phase/stage setup for the existing junction. The results should be viewed more for a comparative assessment of with and without proposed development for the various scenarios.

No survey information was available for the pre-pedestrianisation scenario for 6 of the junctions surrounding New Street. In order to compare how the junctions were operating before and after the pedestrianisation of New Street, 2019 flows had to be estimated. This was done using TII growth rates and applying them to the 2023 data. Additionally, assumptions on how the traffic had diverted to other streets post-pedestrianisation had to be made. These were based on proportioning the flows at junctions using existing data and making assumptions on human behaviour, e.g. choosing to avoid the busy town by turning at a certain junction. Refer to Appendix M for Network Flow Diagrams of the assumed diverted traffic movements. (Note: The 2023 diagrams are the actual flows. The 2019 diagrams contain both actual survey data where available and assumed flows calculated using TII growth rates and diverted traffic due to the Pedestrianisation of New Street.)

7.1.1 Junction 1 - New Street and the Strand (signalised junction)

The Linsig output is summarised below and the full detailed output is included in greater detail in Appendix C.

Table 7-1: Summary for Linsig Analysis Results for Junction 1

Peak Hour Flow	Max Degree of Saturation (%)
AM 2023 Existing Survey	45.9
AM 2020 Existing Survey	34.0
AM 2019 Estimated pre-pedestrianisation	69.3
PM 2023 Existing Survey	53.1
PM 2020 Existing Survey	49.0
PM 2019 Estimated pre-pedestrianisation	77.5

The above analysis compares the current performance of the junction using 2023 and 2020 survey data with the estimated performance for 2019. The 2019 figures were estimated using the following methodology and assumptions;

- Using TII growth factors 2019 figures were reverse calculated from 2023. The resulting scenario assumes pedestrianisation of New Street.
- Using the 2019 surveyed data for Junction 4 the total number of PCUs travelling south along New Street was calculated as follows:
    - 33% of traffic that travels south on New Street is assumed to originate from Marina Village.
    - 33% of traffic that travels south on New Street is assumed to originate from The Green.
    - 33% of traffic that travels south on New Street is assumed to originate from Strand Street.

The junction is performing well in all years during the AM and PM peak hours, with an improvement in the 2020, and 2023 scenarios post-pedestrianisation. The above results are based on a 90 second cycle time and calling pedestrians every cycle during peak times.

The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.2 Junction 2 – Old Street and the Strand

The Junction 2 output is summarised below and the full detailed output is included in greater detail in Appendix D.

Table 7-2: Summary of Junctions 9 Analysis Results for Junction 2

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.56
AM 2020 Existing Survey	0.29
AM 2019 Estimated Pre-Pedestrianisation	-
PM 2023 Existing Survey	0.37
PM 2020 Existing Survey	0.47
PM 2019 Estimated Pre-Pedestrianisation	-

The above analysis compares the current performance of the junction using 2023 survey data with the available 2020 survey data. It should be noted that the 2020 survey results would have been affected by Covid-19 restrictions. No survey was completed for the junction in 2019. However, the junction is operating well within the design threshold in both 2023 and 2020. It is expected that flows would have been less in 2019 as 2023 values would be subject to normal growth as per the TII growth factors, therefore it was not deemed necessary to complete any further analysis.

Based on the survey information, the junction is operating under the design threshold in all years. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.3 Junction 3 – Townyard Lane and the Strand

The Junction 3 output is summarised below and the full detailed output is included in greater detail in Appendix E.

Table 7-3: Summary of Junctions 9 Analysis Results for Junction 3

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.40
AM 2020 Existing Survey	-
AM 2019 Estimated Pre-Pedestrianisation	-
PM 2023 Existing Survey	0.47
PM 2020 Existing Survey	-
PM 2019 Estimated Pre-Pedestrianisation	-

The above analysis shows the current performance of the junction using 2023 survey. No survey was completed for the junction in 2019 or 2020. However, the junction is operating well within the design threshold in both 2023 Am and PM scenarios. It is expected that flows would have been less in 2019 as 2023 values would be subject to normal growth as per the TII growth factors and the pedestrianisation in place on New Street, therefore it was not deemed necessary to complete any further analysis.

The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.4 Junction 4 – The Diamond - New Street and the R106 (signalised junction)

The linsig output is summarised below and the full detailed output is included in greater detail in Appendix F.

Table 7-4: Summary of Linsig Analysis Results for Junction 4

Peak Hour Flow	Max Degree of Saturation (%)
AM 2023 Existing Survey	79.6
AM 2020 Existing Survey	115.3
AM 2019 Existing Survey	170.7
PM 2023 Existing Survey	69.4
PM 2020 Existing Survey	136.4
PM 2019 Existing Survey	144.6

The above analysis compares the current performance of the junction using 2023, 2020 and 2019 survey data.

The junction is performing well in 2023 during the AM and PM peak hours, but it is over capacity for 2019 and 2020 scenarios during the AM and PM peak hours. The above results are based on a 90 second cycle time and calling pedestrians every cycle during peak times.

The results indicate maximum queuing of 13.4 PCUs in the peak hour. This is a decrease on the surveyed queuing experienced in 2019, showing that the pedestrianisation of New Street has improved the performance of this junction.

7.1.5 Junction 5 – Townyard Lane and the R106

The Junction 5 output is summarised below and the full detailed output is included in greater detail in Appendix G.

Table 7-5: Summary of Junctions 9 Analysis Results for Junction 5

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.32
AM 2020 Existing Survey	0.26
AM 2019 Estimated pre-pedestrianisation	0.23
PM 2023 Existing Survey	0.30
PM 2020 Existing Survey	0.36
PM 2019 Estimated pre-pedestrianisation	0.07

The above analysis compares the current performance of the junction using 2023 survey data with the available 2020 survey data and the estimated pre-pedestrianisation values. It should be noted that the 2020 survey results would have been affected by Covid-19 restrictions. In the absence of actual 2019 data an estimated value has been calculated using both TII Growth Factors and accounting for displaced traffic assumed to have previously used New Street. The 2019 figures were estimated using the following methodology and assumptions;

- Using TII growth factors 2019 figures were reverse calculated from 2023. The resulting scenario assumes pedestrianisation of New Street.
- The 2019 survey data indicates that 15 PCUs travelling from the east turn right onto New Street in the AM. Therefore, 15 PCUs were subtracted from the assumed 2019 right turning traffic at Junction 5. This was then repeated for the PM scenario.
- Additionally, a percentage of traffic from Church Road that would have been travelling north on New Street will now turn right onto the R106 and then left onto Townyard lane. Proportions of right turning traffic were calculated based on the 2019 survey at junction 4 and the resulting PCUs were subtracted from the left turning traffic at junction 5.

Based on the 2023 survey information, it is estimated that 1 car will travel along Townyard Lane every 20 seconds compared to 1 car every 40 seconds in 2019. Despite this increase in traffic volumes, the junction is operating under the design threshold in all years. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.6 Junction 6 – Old Street and the R106

The Junction 6 output is summarised below and the full detailed output is included in greater detail in Appendix H.

Table 7-6:Summary of Junctions 9 Analysis Results for Junction 6

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.21
AM 2020 Existing Survey	0.21
AM 2019 Estimated pre-pedestrianisation	0.14
PM 2023 Existing Survey	0.26
PM 2020 Existing Survey	0.20
PM 2019 Estimated pre-pedestrianisation	0.13

The above analysis compares the current performance of the junction using 2023 survey data with the available 2020 survey data and the estimated pre-pedestrianisation values. It should be noted that the 2020 survey results would have been affected by Covid-19 restrictions. In the absence of actual 2019 data an estimated value has been calculated using both TII Growth Factors and accounting for displaced traffic assumed to have previously used New Street. The 2019 figures were estimated using the following methodology and assumptions;

- Using TII growth factors 2019 figures were reverse calculated from 2023. The resulting scenario assumes pedestrianisation of New Street.
- It was assumed that traffic travelling west to east in 2019 and turning left at Junction 4 will now turn left at Old Street rather than travelling through the town. These numbers have been subtracted from the assumed 2019 values for Junction 6.
- Additionally, a percentage of traffic from Church Road that would have been travelling north on New Street will now turn left onto the R106 and then right onto Old Street. Proportions of left turning traffic were calculated based on the 2019 survey at junction 4 and the resulting PCUs were subtracted from the right turning traffic at Junction 6.

The junction is operating under the design threshold in all years. The results indicate low volumes of traffic resulting in negligible queuing at this junction. It is noted that bus services have been diverted to Old Street to permit the pedestrianisation of New Street. This has not resulted in queuing at Old Street.

7.1.7 Junction 7 – James Terrace and the R106

The Junction 7 output is summarised below and the full detailed output is included in greater detail in Appendix I.

Table 7-7: Summary of Junctions 9 Analysis Results for Junction 7

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.80
AM 2020 Existing Survey	0.63
AM 2019 Estimated pre-pedestrianisation	0.41
PM 2023 Existing Survey	0.84
PM 2020 Existing Survey	0.84
PM 2019 Estimated pre-pedestrianisation	0.53

The above analysis compares the current performance of the junction using 2023 survey data with the available 2020 survey data and the estimated pre-pedestrianisation values. It should be noted that the 2020 survey results would have been affected by Covid-19 restrictions. In the absence of actual 2019 data an estimated value has been calculated using both TII Growth Factors and accounting for displaced traffic assumed to have previously used New Street. The 2019 figures were estimated using the following methodology and assumptions;

- Using TII growth factors 2019 figures were reverse calculated from 2023. The resulting scenario assumes pedestrianisation of New Street.
- It was assumed that traffic that would have travelled south along New Street pre-pedestrianisation now travels south along James Terrace. 50% of the surveyed 2019 traffic travelling south on New Street at Junction 4 was subtracted from the reverse calculated 2019 figures.

The junction is operating around the design threshold in 2023 with maximum queuing of 4.7 PCUs experienced at the peak hour. This is an increase of 3.6 PCUs from the 2019 survey results however it is within the norms of an urban environment accounting for the rerouted traffic as a result of the pedestrianisation of New Street.

7.1.8 Junction 8 – The Rise and the R106

The Junction 8 output is summarised below and the full detailed output is included in greater detail in Appendix J.

Table 7-8: Summary of Junctions 9 Analysis Results for Junction 8

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.47
AM 2020 Existing Survey	-
AM 2019 Existing Survey	0.43
PM 2023 Existing Survey	0.15
PM 2020 Existing Survey	-
PM 2019 Existing Survey	0.18

The above analysis compares the current performance of the junction using 2023 survey data with the available 2019 survey data. No survey was completed for the junction in 2020. The junction is operating well within the design threshold in both 2023 and 2020. There is little difference between the 2019 and 2023 results. The junction is also located at a significant distance from the site and thus would not be overly impacted by the pedestrianisation of New Street. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.9 Junction 9 – Grove Road and the R106

The Junction 9 output is summarised below and the full detailed output is included in greater detail in Appendix K.

Table 7-9: Summary of Junctions 9 Analysis Results for Junction 9

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.20
AM 2020 Existing Survey	-
AM 2019 Existing Survey	0.26
PM 2023 Existing Survey	0.23
PM 2020 Existing Survey	-
PM 2019 Existing Survey	0.34

The above analysis compares the current performance of the junction using 2023 survey data with the available 2019 survey data. No survey was completed for the junction in 2020. The junction is operating well within the design threshold in both 2023 and 2020. There is little difference between the 2019 and 2023 results. The junction is also located at a significant distance from the site and thus would not be

overly impacted by the pedestrianisation of New Street. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.10 Junction 10 – Grove Road and Church Road

The Junction 10 output is summarised below and the full detailed output is included in greater detail in Appendix L.

Table 7-10: Summary of Junctions 9 Analysis Results for Junction 10

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.24
AM 2020 Existing Survey	-
AM 2019 Existing Survey	0.32
PM 2023 Existing Survey	0.26
PM 2020 Existing Survey	-
PM 2019 Existing Survey	0.12

The above analysis compares the current performance of the junction using 2023 survey data with the available 2019 survey data. No survey was completed for the junction in 2020. The junction is operating well within the design threshold in both 2023 and 2020. There is little difference between the 2019 and 2023 results. The junction is also located at a significant distance from the site and thus would not be overly impacted by the pedestrianisation of New Street. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.11 Junction 11 – Grove Road and Church Road

The Junction 11 output is summarised below and the full detailed output is included in greater detail in Appendix M.

Table 7-11: Summary of Junctions 9 Analysis Results for Junction 11

Peak Hour Flow	Maximum RFC
AM 2023 Existing Survey	0.11
AM 2020 Existing Survey	-
AM 2019 Existing Survey	0.10
PM 2023 Existing Survey	0.49
PM 2020 Existing Survey	-
AM 2019 Existing Survey	0.51

The above analysis compares the current performance of the junction using 2023 survey data with the available 2019 survey data. No survey was completed for the junction in 2020. The junction is operating well within the design threshold in both 2023 and 2020. There is little difference between the 2019 and 2023 results. The junction is also located at a significant distance from the site and thus would not be overly impacted by the pedestrianisation of New Street. The results indicate low volumes of traffic resulting in negligible queuing at this junction.

7.1.12 Analysis Summary

The junction capacity analysis has been carried out to include for the existing 2023 traffic, the surveyed 2020 traffic and the estimated/surveyed 2019 traffic, summary results are shown in the table below.

Table 7-12: Summary Maximum Results for all Surrounding Junctions

Junction	2023 Surveyed RFC/DOS	2020 Surveyed RFC/DOS	2019 Surveyed RFC/DOS	2019 Estimated RFC/DOS
Junction 1 – New Street and the Strand (signalised junction)	53.1	49.0	-	77.5
Junction 2 – Old Street and the Strand	0.56	0.47	-	*see note below
Junction 3 – Townyard Lane and the Strand	0.47	-	-	*see note below
Junction 4 – New Street and the R106 (signalised junction)	79.6	136.4	170.7	-
Junction 5 – Townyard Lane and the R106	0.32	0.36	-	0.23
Junction 6 – Old Street and the R106	0.26	0.21	-	0.14
Junction 7 – James' Terrace and the R106	0.84	0.84	-	0.53
Junction 8 – The Rise and the R106	0.47	-	0.43	-
Junction 9 – Grove Road and the R106	0.23	-	0.34	-
Junction 10 – Grove Road and The Rise	0.26	-	0.32	-
Junction 11 – Grove Road and Church Road	0.49	-	0.51	-

**Note*: Junction operating within design threshold for the 2023 survey year. It is expected that flows would have been less in 2019 as 2023 values would be subject to normal growth as per the TII growth factors, therefore it was not deemed necessary to complete any further analysis.*

It is considered that in urban areas a certain level of congestion is to be expected during peak times. From the above modelling results, it is concluded that the pedestrianisation of New St has had little impact on the operational capacity of the surrounding network of roads and junctions and has resulted in improvements in efficiencies at the Diamond.

8 Road Safety

A Road Safety Audit for the proposed public realm improvements for a pedestrianised New Street has been undertaken by Bruton Consulting Engineers and supplied as a separate report. The recommendations of the report have been addressed where appropriate within the proposed layout design.

9 Internal Layout

The layout of the proposed public realm improvements is detailed in the landscape architect's drawings submitted as part of this planning submission.

The development consists of public realm improvements for a pedestrianised New Street in Malahide, Co. Dublin.

1. The southern portion of the proposed public realm improvements facilitates one-way restricted traffic movements from the southern end of New Street during designated hours to accommodate deliveries, refuse collection and emergency vehicles. Loading bays and accessible parking coincident with the HSE Building are also provided.
2. The northern portion of the proposed public realm improvements provides two-way access from the northern end of New Street to allow for local residential and emergency vehicle access to Ross Cottages dwellings and environs.

Figure 9-1: Proposed Site Layout (© DFLA)

9.1 DMURS

The roads layout together with pedestrian and cycle facilities for the site have been developed considering the design principles set out in the Design Manual for Roads and Streets (2019). The design speed for the site is 10 kph, and appropriate speed restriction signs will be set out at the entrances to New Street.

The car has a significant impact on how street networks and streets are designed and how people interact with them. The relationship between cars and people can be illustrated via four distinct models:

a. The first model is where traffic and people are segregated, and the car is dominant.
b. The second model is where the car and people are segregated from each other.
c. The third model is where traffic and people mix, although on a more equitable basis.
d. The fourth model is where the car is excluded altogether.

The proposed public realm improvements for a pedestrianised New Street actively migrates from the pre-existing car dominant streetscape and promotion of private motor vehicle use to a pedestrian/cyclist dominated streetscape.

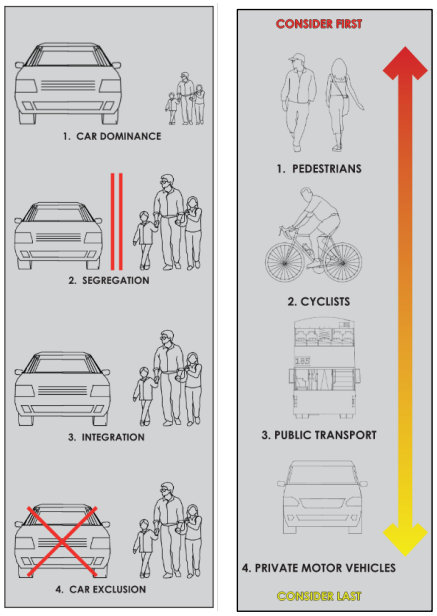

Figure 9-2: DMURS Figure Extracts

A sense of place is established in the public realm design proposals through satisfying the core design principles of:

- **Connectivity:** The creation of vibrant and active places requires pedestrian activity. This in turn requires walkable street networks that can be easily navigated and are well connected.
- **Enclosure:** A sense of enclosure spatially defines streets and creates a more intimate and supervised environment. A sense of enclosure is achieved by orientating buildings toward the street and placing them along its edge as in the case of New Street. The use of street trees and soft and hard landscaping features will also enhance the feeling of enclosure.
- **Active Edge:** An active frontage enlivens the edge of the street creating a more interesting and engaging environment. An active frontage is achieved with frequent entrances and openings that ensure the street is overlooked and generate pedestrian activity as people come and go from buildings, as is naturally the case with New Street and the rejuvenation of activity through the proposed pedestrianisation.
- **Pedestrian Activity/Facilities:** The sense of intimacy, interest and overlooking that is created by a street that is enclosed and lined with active frontages enhances a pedestrian's feeling of security and well-being. Good pedestrian facilities (such as wide footpaths and well-designed crossings) also make walking a more convenient and pleasurable experience that will further encourage pedestrian activity.

9.2 Visibility Splays

The site layout has been developed to provide adequate turning provision for refuse vehicles and fire tender access. Forward visibility and visibility splays have been provided on the basis of the requirements of Sections 4.4.4 and 4.4.5 of the DMURS manual. Compliance with the requirements is set out on the relevant PUNCH drawings.

9.3 Vehicle Manoeuvring

Autotrack analysis has been undertaken to ensure there are no issues with swept paths and manoeuvrability of fire appliances, refuse vehicles and other design vehicles including but not limited to the following:

- Access to the Marina for oversized vehicles carrying boats to/from the Marina, with access required via New Street.
- Fire tender access (to include Turn Table ladder Fire Unit) to New St. & Ross Cottages.
- HGV Access for deliveries
- Accessible parking at HSE Building
- Refuse collection on New Street and Ross Cottages

Please refer to the Vehicle Swept Path drawings prepared by PUNCH for illustration of the various vehicle movements throughout the site extents.

10 Parking

10.1 Car Parking

Due to the nature of the proposed public realm improvements, parking facilities are intentionally limited. Specifically, parking facilities are restricted to a single accessible parking facility at the HSE building location.

It is noted that access to private residential parking is accommodated to existing residential dwellings located on New Street and Ross Cottages.

The 'standard' parking spaces will be demarcated with white lines. All car parking spaces will be 2.4m by 4.8m, with disabled spaces providing an additional width and length of 1.2m.

10.2 Cycle Parking

Cycling is to be significantly encouraged as part of the proposed public realm improvements. Cycle parking serving the public realm improvements is provided as follows:

Table 10-1: Proposed Cycle Parking Quantum for the New Street Public Realm Development

	Standard Bicycle Stands	E-Bike Stands	Cargo Bike Spaces
Total	15	5	3

10.3 Service and Delivery Trips

Vehicular set-down access is provided within the site. Delivery and service access will be facilitated through the loadings bays and designated loading areas distributed throughout the street.

All deliveries will be restricted to designated hours to minimize any potential conflict with non-motorised users. Any non-standard vehicle access, e.g. oversized vehicles carrying boats to/from the Marina, will be scheduled and notified in advance.

11 Construction Stage Traffic

11.1 Construction Phase

The volumes of traffic that will be generated during the construction phase of the proposed public realm improvements will be small in comparison to the existing traffic volumes in the general area.

The construction stage therefore does not require quantitative traffic analysis.

11.2 Construction Traffic Management Plan

The successful contractor will be required to carry out a traffic management plan for the duration of the works. This will involve consultation with the local authority and/or the Gardaí, and once agreed will be adhered to for all aspects of construction that involves movement of vehicles in and out of the site.

12 Public Transport, Pedestrians/ Cyclists

To ensure future transport sustainability and to endeavour to make new developments as accessible as possible to travel by other modes of transport, an assessment has been made of the existing pedestrian, cyclist, and public transport facilities.

12.1 Public Transport

12.1.1 Train Services

Malahide Train Station is served by the following Iarnród Éireann and DART & Dublin Commuter services:

- Dublin – Dundalk/ Newry (Iarnród Éireann)
- Gorey/ Bray – Dublin – Howth/ Newry (DART & Dublin Commuter)
- Newry/ Howth – Dublin – Bray/ Gorey (DART & Dublin Commuter)

As shown in Figure 12-1, the site is connected to the Dublin Area Train and Tram services via the Northwest Commuter Line and to the DART Line. Connection to the Irish Rail network is shown in Figure 12-2. The station is approximately 150m (2-minute walk) from the top entrance of New Street. Please refer to Figure 3-10 for the location of Malahide Train Station with respect to the site boundary.

Train routes are daily.

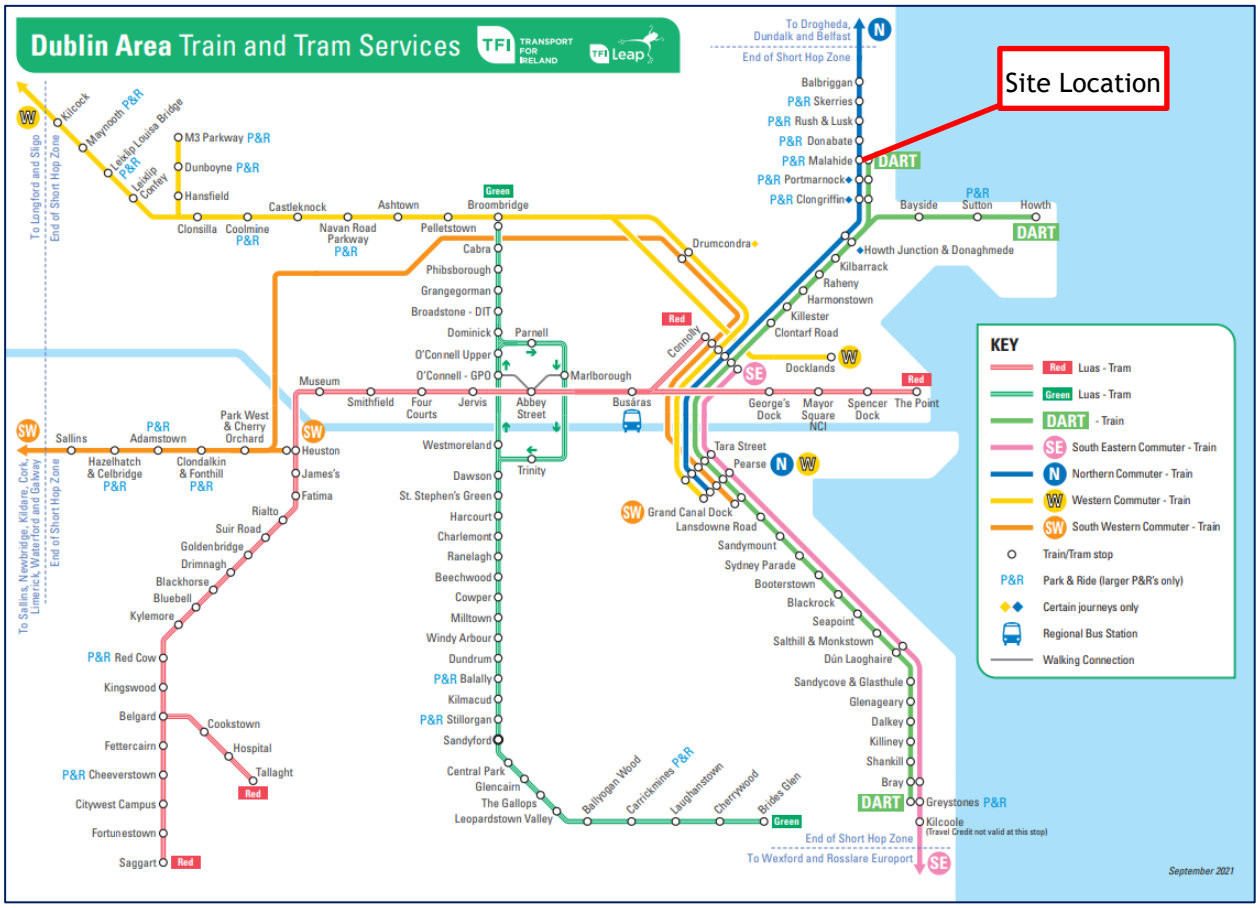

Figure 12-1: Site Location Relative to Dublin Public Transport Network (Ref: https://www.transportforireland.ie)

Figure 12-2: Site Location Relative to National Rail Network (Ref: https://www.irishrail.ie)

12.1.2 Bus Services

The site is in a good location to avail of the majority of bus services available nearby. Figure 12-2 below shows the location of nearby public transport infrastructure in the vicinity of the proposed public realm improvements, and Table 12-1 shows the routes serving the various bus stops.

Bus routes are daily.

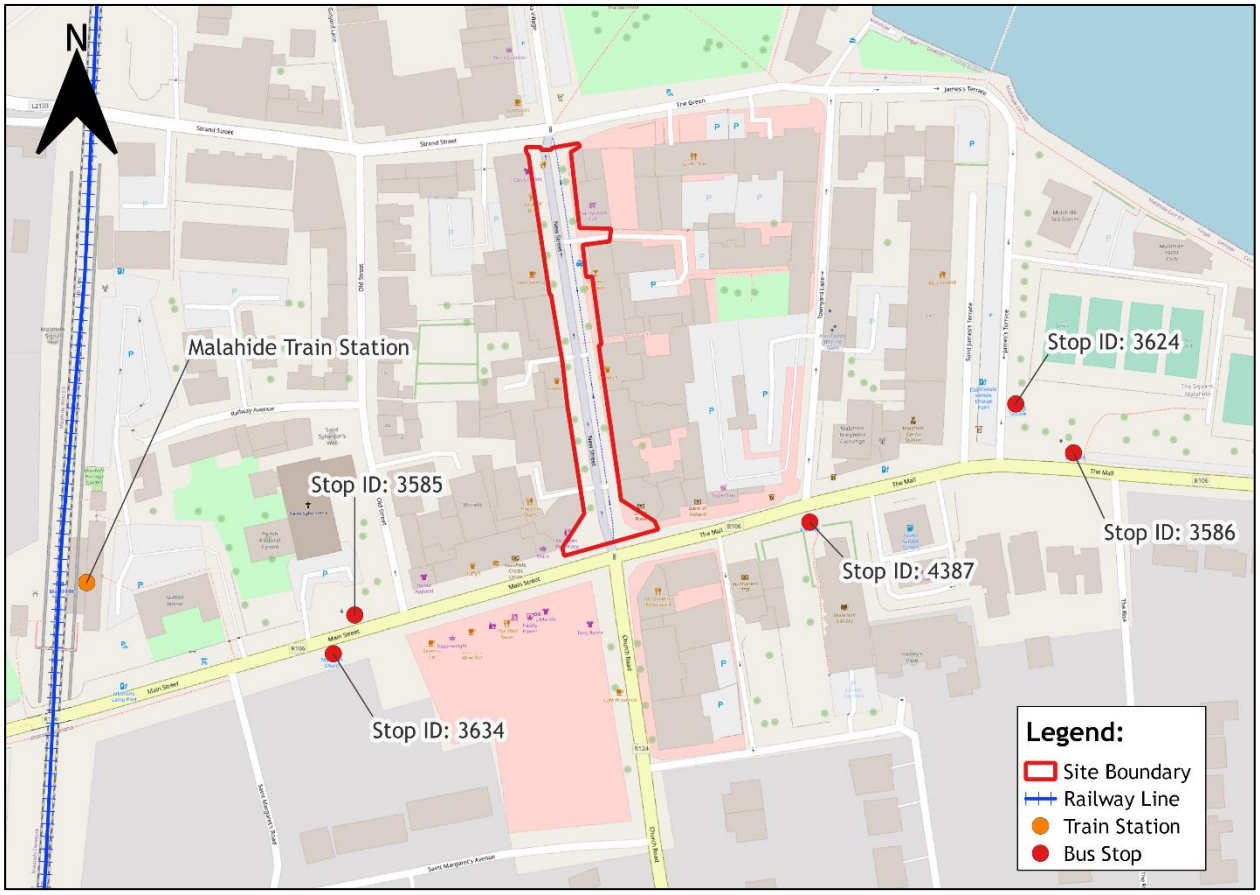

Figure 12-3: Existing Bus Stops/ Train Stations in the vicinity of the proposed public realm improvements.

Table 12-1: Bus routes adjacent to the proposed public realm improvements.

Route No.	Route Name	Operated By	Bus Stop ID:				
			3585	3634	4387	3624	3586
32X	Swords Road (Lawson Spinney) - University College Dublin	Dublin Bus	✓	✓	✓		
42	Talbot Street (opp. Bank of Ireland) - Coast Road	Dublin Bus	✓	✓			
42d	The Helix - Strand Road (St. Anne's Estate)	Dublin Bus	✓	✓			
42n	Dublin City South, D'Olier Str - Portmarnock, Strand Road	Nitelink/ Dublin Bus	✓				✓
102	Dublin Airport - Sutton Station	Go-Ahead	✓	✓	✓		✓
102a	Sutton - Swords	Go-Ahead		✓	✓		
102c	Clarehall – Sutton	Go-Ahead	✓	✓	✓		✓
102p	River Valley – Portmarnock	Go-Ahead	✓	✓	✓		✓
102t	Swords - Sutton	Go-Ahead	✓	✓	✓		✓
142	Wendell Avenue - University College of Dublin UCD	Dublin Bus	✓	✓			
H2	National Lottery Head Quarters - Malahide Garda Station	Dublin Bus			✓	✓	✓

It is noted that the H2 bus, terminating on James's Terrace, has been diverted down Old Street to accommodate the pedestrianisation of New Street. The frequency of this service is limited and therefore this diversion has had minimal impact on Old Street. No change has been made to the service near the estuary.

12.1.3 Taxi Services

Taxis are available on request.

As per Fingal Development Plan (2023-2029), the objective of the plan is to facilitate and promote the development of accessible taxi services. It is also the objective of the plan to facilitate the provision of taxi ranks at appropriate locations on streets. The accessibility of these taxi services is an important element in the public transport mix, in providing a demand responsive 24-hour door to door service.

The taxi rank was moved from New Street to James's Terrace to accommodate the pedestrianisation of New Street. This is currently under review by FCC.

12.2 Pedestrians

The proposed public realm improvements will increase the number of pedestrian trips to and from New Street. It is therefore important that the public realm improvements is properly integrated into the existing footpath network. The integration of the footpath to connect to existing pedestrian routes on The Mall (R106) and Strand Street will provide direct pedestrian routes from New Street to/ from surrounding areas. The pedestrian network also provides routes to/ from the surrounding public transport network, including nearby bus routes on The Mall and Dublin Road (R106), as well as Malahide Train Station.

Pedestrian surveys taken in December 2019 on New Street pre-pedestrianisation indicate a total of 2988 pedestrians travelling along New Street over a 13-hour period between 7am and 8pm. The peak hour occurred between 1-2pm with a total of 385 pedestrians travelling along New Street in the hour.

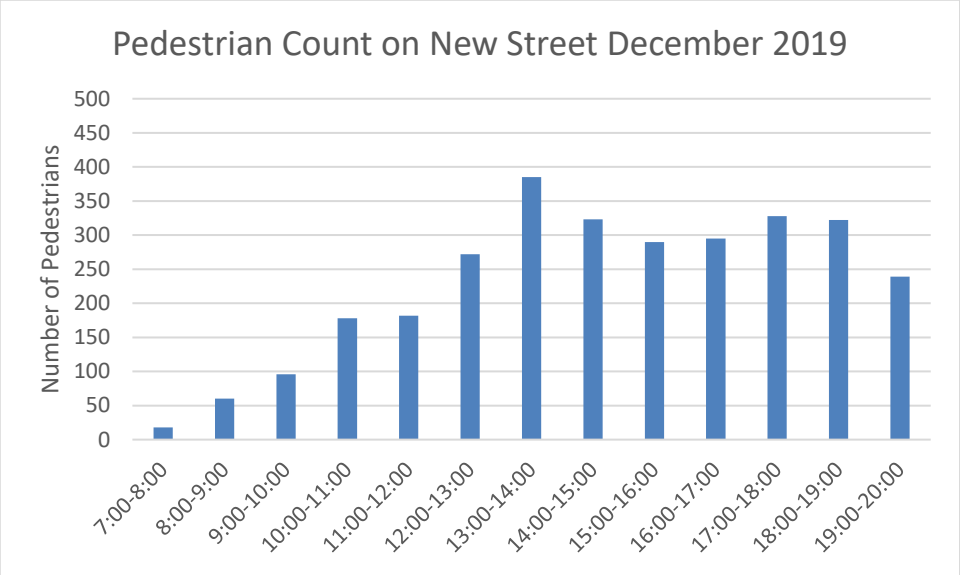

Figure 12-4: Pedestrian Count on New Street (December 2019).

Pedestrian numbers taken in January 2023 show a 23% increase in the number of pedestrians travelling along New Street post pedestrianisation with a total of 3679 pedestrians recorded over the same time period. The peak hour remained 1-2pm with a total of 461 pedestrians travelling along New Street in the hour.

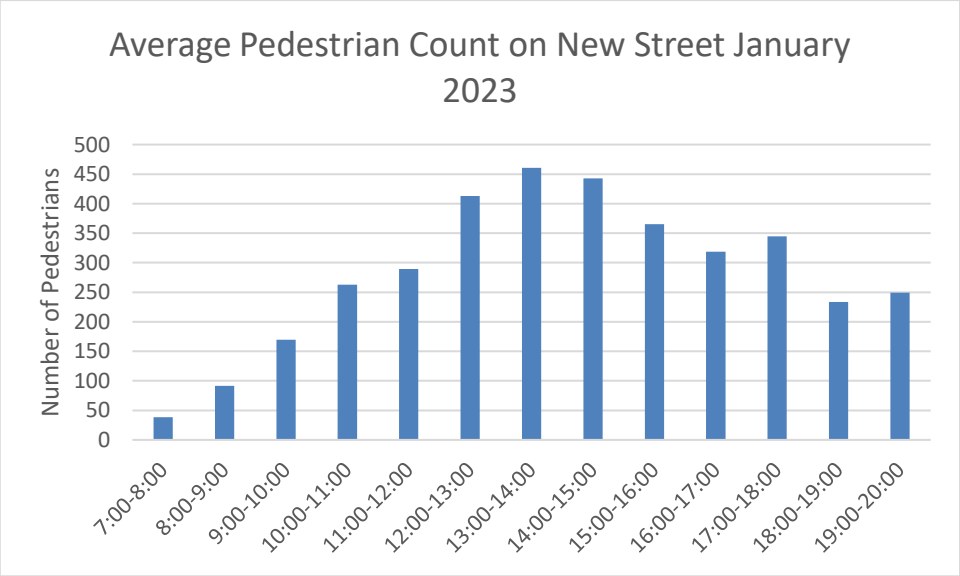

Figure 12-5: Pedestrian Count on New Street (January 2023).

Both surveys were taken during a weekday in winter months, December and January respectively, allowing for a direct comparison to be made. It is expected that the number of pedestrians would increase in the warmer/drier periods of the year.

12.3 Cycling

Cycling is to be significantly encourages as part of the proposed public realm improvements. Bike stand parking is provided at various locations along the street. Cycling enhances both the environment and quality of life of the surrounding area. Cycling has an important transport role, in reducing car usage. The consequential reduction in emissions improves air quality, aids the ecological system and results in less noise pollution.

Providing cycle and pedestrian links that are free of motorised traffic will encourage the use of cycling.

The primary access points to the proposed public realm improvements are via The Diamond, The Mall/Main Street/Dublin Road (R106) to the south and to the north via Strand Street. While there are no existing cycle lanes on either The Mall (R106) or Strand Street, the Fingal Development Plan (2023-2029) outlines proposals for an indicative cycle/pedestrian route on The Mall/Main Street/Dublin Road (R106) at the southern border of New Street. The Greater Dublin Area (GDA) Cycle Network is also proposed on The Mall/Main Street/Dublin Road (R106) which will provide a cycle route from Malahide to Swords. Please refer to Figure 3-39.

The proposed public realm improvements for a pedestrianised New Street will make New Street a focal point with Fingal's Greenway network. New Street would provide connection to numerous alternative Greenway/ cycle way projects that are being proposed or at various planning stages including, the Fingal Coastal Way, Sutton to Malahide Greenway, and Broadmeadow Way. These proposed greenways (shared footpath and cycleways) will provide excellent connection points to and from the proposed public realm improvements at New Street to/ from surrounding areas including: Newbridge Demesne in Donabate to Fingal county boundary, north of Balbriggan (Fingal Coastal Way), Sutton Cross to Baldoyle and Portmarnock to Malahide (Sutton to Malahide Greenway), and Malahide Demesne to Newbridge Demesne via the railway causeway across the Malahide Estuary (Broadmeadow Way).

General proposals and objectives as noted in the Development Plan are to reduce car dependency and promote walking and cycling as sustainable modes of transport. The inclusion of indicative cycle/ pedestrian routes and the GDA Cycle Network proposed on The Mall/Main Street/Dublin Road (R106) at the southern end of New Street as well as proposed Greenways will improve connectivity to the site.

13 Access for People with Disabilities

Parking facilities for disabled users are provided within the proposed public realm improvements at the HSE facility. It is noted that FCC have also provided disabled and age-friendly parking spaces on The Mall and The Green, thus improving facilities in the immediate vicinity of New Street.

14 Summary and Conclusion

1. The development consists of public realm improvements for a pedestrianised New Street in Malahide, Co. Dublin.

2. A number of traffic surveys were compared in order to assess any change in traffic flows due to the proposed public realm improvements for a pedestrianised New Street.

3. It is proposed to access the development as follows:

    a. A one-way restricted vehicular traffic system (northbound).
    b. Deliveries permitted from 7am-11am each day, with vehicle bollards at the Diamond and at the junction with Ross Cottages as control measure.
    c. Unrestricted vehicular access to Ross Cottages (from the north).

4. Capacity analysis was carried out on 11 no. junctions:
    1. Junction of New Street, Strand Street, The Green, Marina Village (signalised junction)
    2. Junction of Old Street and Strand Street
    3. Junction of Townyard Lane and Strand Street
    4. The Diamond - Junction of New Street and the R106 (signalised junction)
    5. Junction of Townyard Lane and The Mall (R106)
    6. Junction of Old Street and Dublin Road (R106)
    7. Junction of James' Terrace and The Mall (R106)
    8. Junction of the Rise and The Mall (R106)
    9. Junction of Grove Road and The Mall (R106)
    10. Junction of Grove Road and the Rise
    11. Junction of Grove Road and Church Road

    The analysis shows that, when comparing the 2023 post-pedestrianisation with the 2019 pre-pedestrianisation scenarios, there are minimal effects on the capacity for the surrounding junctions and there are significant improvements at The Diamond, the main junction in the village.

5. Parking spaces for the proposed development are restricted to a single accessible parking facility at the HSE building location.

6. Secure cycle parking facilities have been provided within the proposed public realm improvements to meet the requirements set out in the Fingal Development Plan.

Sites Overview

Survey Name :	ITS J-410 Malahide
Site:	1
Date:	15.07.2020
Time:	07:00-19:00
Location:	53.451441, -6.153758
Classification:	Car, LGV, OGV1, OGV2, PSV, P/C, M/C

Irish Traffic Surveys

Site 1, Card A5

Mapping Image

Survey duration:	12h
Time Period:	07:00-19:00
Junction Type:	4 Arm Junction
Reporting Interval:	15min
Classification scheme:	Car, LGV, OGV1, OGV2, PSV, P/C, M/C
Queues Required:	Yes
Pedestrian required:	No

Site 1, Card Nov19

Survey Name :	ITS J-410 Malahide
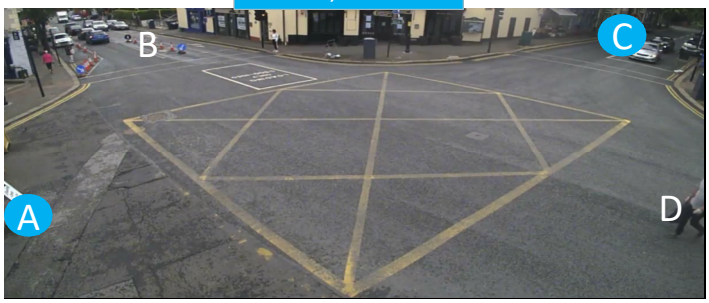
Site:	4
Date:	15.07.2020
Time:	07:00-19:00
Location:	53.451441, -6.153758
Classification:	Car, LGV, OGV1, OGV2, PSV, P/C, M/C

Irish Traffic Surveys

Site 4, Card T13



Mapping Image

Survey duration:	12h
Time Period:	07:00-19:00
Junction Type:	4 Arm Junction
Reporting Interval:	15min
Classification scheme:	Car, LGV, OGV1, OGV2, PSV, P/C, M/C
Queues Required:	Yes
Pedestrian required:	No

Irish Traffic Surveys

Site 6, Card T1

Mapping Image

Survey duration:	12h
Time Period:	07:00-19:00
Junction Type:	3 Arm Junction
Reporting Interval:	15min
Classification scheme:	Car, LGV, OGV1, OGV2, PSV, P/C, M/C
Queues Required:	Yes
Pedestrian required:	No

Appendix B Junction 1 - New Street and the Strand - Linsig Analysis

Full Input Data And Results

User and Project Details

Project:	**Public Realm at New Street, Malahide, Co. Dublin**
Title:	**Public Realm at New Street, Malahide, Co. Dublin**
Location:	
Client:	Fingal County Council
Date Started:	January 2023
Checked By:	D Lehane
Additional detail:	
File name:	222126 New Street - Jn 1_JPM 2023-01-30.lsg3x
Author:	JP Murray
Company:	PUNCH Consulting Engineers
Address:	Carnegie House, Library Road, Dun Laoghaire, Co Dublin, A96 C7W7, Ireland

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D1	2023 Survey Year	AM	ONE HOUR	08:15	09:45	15
D2	2023 Survey Year	PM	ONE HOUR	16:45	18:15	15
D3	2020 Survey Year	AM	ONE HOUR	08:15	09:45	15
D4	2020 Survey Year	PM	ONE HOUR	16:45	18:15	15

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Strand Street/Old Street/Gasyard Lan	Crossroads	Two-way		12.18	B

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Gasyard Lane		Major
B	Strand Street		Minor
C	Old Street		Major
D	Strand Street		Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A - Gasyard Lane	6.00			80.0	✓	0.00
C - Old Street	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Strand Street	One lane	4.00	25	15
D - Strand Street	One lane	3.00	20	12

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for A-D	Slope for B-A	Slope for B-C	Slope for B-D	Slope for C-A	Slope for C-B	Slope for C-D	Slope for D-A	Slope for D-B	Slope for D-C
1	A-D	620	-	-	-	-	-	-	0.240	0.343	0.240	-	-	-
1	B-A	542	0.099	0.250	0.250	-	-	-	0.157	0.357	-	0.250	0.250	0.125
1	B-C	697	0.107	0.270	-	-	-	-	-	-	-	-	-	-

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Townyard Lane/The Green	T-Junction	Two-way		5.07	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	The Green		Major
B	Townyard Lane		Minor
C	The Green		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - The Green	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Townyard Lane	One lane	3.20	40	20

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	510	0.093	0.235	0.148	0.336
1	B-C	649	0.100	0.252	-	-
1	C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 5	T-Junction	Two-way		1.34	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	R106		Major
B	Townyard Lane		Minor
C	R106		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - R106	6.00			100.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Townyard Lane	One lane	3.20	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	487	0.089	0.224	0.141	0.321
1	B-C	636	0.098	0.247	-	-
1	C-B	632	0.245	0.245	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 8 - The Rise/R106	T-Junction	Two-way		2.79	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	R106		Major
B	The Rise		Minor
C	R106		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - R106	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - The Rise	One lane	2.50	30	25

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	475	0.086	0.218	0.137	0.312
1	B-C	608	0.093	0.235	-	-
1	C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.
Streams may be combined, in which case capacity will be adjusted.
Values are shown for the first time segment only; they may differ for subsequent time segments.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 9 - R106/Grove Road	T-Junction	Two-way		1.10	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	R106		Major
B	Grove Road		Minor
C	R106		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - R106	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Grove Road	One lane	3.30	70	45

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	538	0.098	0.248	0.156	0.354
1	B-C	672	0.103	0.260	-	-
1	C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

2023 Survey Year, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 10 - The Rise/ Grove Road	T-Junction	Two-way		6.30	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Grove Road		Major
B	The Rise		Minor
C	Grove Road		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Grove Road	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - The Rise	One lane	2.40	25	20

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	466	0.085	0.214	0.135	0.306
1	B-C	598	0.092	0.232	-	-
1	C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Arm	Name	Description	Arm type
A	Church Road		Major
B	Grove Road		Minor
C	Church Road		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Church Road	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Grove Road	One lane	2.50	20	16

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	467	0.085	0.215	0.135	0.307
1	B-C	602	0.092	0.233	-	-
1	C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
